NEW QUESTION: 1What Scrum event or artifact is the set of items selected for the Sprint, plus a plan for delivering the product Increment and realizing the Sprint Goal?**A.** Working Product Increment**B.** Scrum**C.** Sprint**D.** Product Backlog**E.** Sprint Backlog**Answer: E**

NEW QUESTION: 2You are the chief technology officer of a major stock exchange in United States. You have just been provided a preliminary project scope statement from your project sponsor with regards to reengineering the organization's back office accounting, billing and administrative system. Which of the following the BEST NEXT plan of action?**A.** Start performing activities to accomplish project objectives**B.** Start documenting the impact of the requested changes**C.** Start establishing and managing project communication channels**D.** Start establishing management plans**E.** Start scope verification**Answer: D**

NEW QUESTION: 3One of the AWS account owners faced a major challenge in June as his account was hacked and the hacker deleted all the data from his AWS account. This resulted in a major blow to the business.Which of the below mentioned steps would not have helped in preventing this action?**A.** Create an AMI and a snapshot of the data at regular intervals as well

as keep a copy to separate regions.**B.** Do not share the AWS access and secret access keys with others as well do not store it inside programs, instead use IAM roles.**C.** Setup an MFA for each user as well as for the root account user.**D.** Take a backup of the critical data to offsite / on premise.**Answer: A**Explanation:ExplanationAWS security follows the shared security model where the user is as much responsible as Amazon. If the user wants to have secure access to AWS while hosting applications on EC2, the first security rule to follow is to enable MFA for all users. This will add an added security layer. In the second step, the user should never give his access or secret access keys to anyone as well as store inside programs. The better solution is to use IAM roles. For critical data of the organization, the user should keep an offsite/ in premise backup which will help to recover critical data in case of security breach. It is recommended to have AWS AMIs and snapshots as well as keep them at other regions so that they will help in the DR scenario. However, in case of a data security breach of the account they may not be very helpful as hacker can delete that. Therefore, creating an AMI and a snapshot of the data at regular intervals as well as keep a copy to separate regions, would not have helped in preventing this action.

NEW QUESTION: 4Your network contains an Active Directory domain named contoso.com. The domain contains three servers. The servers are configured as shown in the following table.You need to ensure that end-to-end encryption is used between clients and Server2 when the clients connect to the network by using DirectAccess.Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)**A.** Restart the IPsec Policy Agent service on Server2.**B.** From the Remote Access Management Console, reload the configuration.**C.** From the Remote Access Management Console, modify the Application Servers settings.**D.** From the Remote Access Management Console, modify the Infrastructure Servers settings.**E.** Add Server2 to a security group in Active Directory.**Answer: C, E**Explanation:When selecting application servers that require end-to-end encryption and authentication, it is important to note that:

- *The selected end-to-end application servers must be members of one or more AD DS security groups.
- *The selected end-to-end application servers must run Windows Server 2008 or later.
- *The selected end-to-end application servers must be accessible via IPv6 (Native or ISATAP, not NAT64).
- *The selected end-to-end application servers can be used with smart cards for an additional level of authorization.
