The best way for you in this regard is to opt for the extensive study services of Estruturit for PMI-CP.

NEW QUESTION: 1

IAMポリシーのプリンシパル要素は、許可を許可または拒否する必要がある特定のエンティティを参照しますが、指定されたエンティティを除く全員に変換します。**A.** プリンシパル**B.** NotPrincipal**C.** アクション**D.** ベンダー**Answer: B**
Explanation: Explanation The element NotPrincipal that is included within your IAM policy statements allows you to specify an exception to a list of principals to whom the access to a specific resource is either allowed or denied. Use the NotPrincipal element to specify an exception to a list of principals. For example, you can deny access to all principals except the one named in the NotPrincipal element.
http://docs.aws.amazon.com/IAM/latest/UserGuide/reference_policies_elements.html#Principal

NEW QUESTION: 2 Choose the four steps required to create and use the chart of accounts.**A.** Create Chart of Accounts Structure.**B.** Create Account Hierarchies.**C.** Create Value Sets.**D.** Create Value Set Values.**E.** Publish Account Hierarchies.**F.** Create Chart of Accounts Structure Instance.**Answer: A,B,C,D**
Explanation: To set up your chart of accounts: 1. (A) Define value sets. Value sets determine the attributes of your account segments such as the segment length, whether to require a segment value, value alignment, and value security. 2. (B) Define your account structure. Indicate how many separate segments your account will have, and for each segment, enter a name, sequence number, and an associated value set. 3. Define rollup groups to create summary accounts whose summary balances you can review. You assign parent segment values to rollup groups. 4. Define your account segment values. If you plan on defining

summary accounts or reporting hierarchies, you must define parent values as well as child or detail values. You can set up hierarchy structures for your segment values. Define parent values that include child values. You can view a segment value's hierarchy structure as well as move the child ranges from one parent value to another. Note: segment values (D) Use the segment values window to define values that belong to independent or dependent value sets. 5. Define Security Rules to restrict user access to certain account segment values. 6. Define cross-validation rules to control the account combinations you want General Ledger to allow. For example, you may decide that your sales cost centers, 600 to 699, should only enter amounts to product sales accounts, 4000 to 4999. 7. Define or enable descriptive flexfields. 8. Define account shorthand aliases to speed entry of account segment values. If you enable shorthand alias flexfield entry when you define your account structure, then you can define aliases, or codes, which stand for complete or partial accounts. 9. Define summary accounts to create and maintain summary balances for quick reporting and online inquiry. 10. Create account combinations. Reference: Defining Your Chart of Accounts

NEW QUESTION: 3 What is the maximum database size allowed? **A. 8TB B. 32GB C. 2GB D. 4TB E. 16TB F. 32TB** **Answer: D**

NEW QUESTION: 4 The following is the correct principle for the deployment of WLAN outdoor sites. **A.** Avoid interference from strong electric and other signals near the site **B.** The site should be directly visible between the coverage areas. It is recommended that there should be no obstacles to block. **C.** To ensure signal transmission, the site installation height is as high as possible **D.** Reliable power is required near the site **Answer: A,B,D**
