NEW QUESTION: 1In the parent table of a referential constraint, a parent key must be which of the following? (Choose two.)**A.** A primary key**B.** A duplicate key**C.** A secondary key**D.** A foreign key**E.** A unique key**Answer: A,E**

NEW QUESTION: 2Scenario: A Citrix Architect is asked by management at the Workslab organization to review their existing configuration and make the necessary upgrades. The architect recommends small changes to the pre-existing NetScaler configuration. Currently, the NetScaler MPX devices are configured in a high availability pair, and the outbound traffic is load-balanced between two Internet service providers (ISPs). However, the failover is NOT happening correctly. The following requirements were discussed during the design requirements phase:
* The return traffic for a specific flow should be routed through the same path while using Link Load Balancing.
* The link should fail over if the ISP router is up and intermediary devices to an ISP router are down.
* Traffic going through one ISP router should fail over to the secondary ISP, and the traffic should NOT flow through both routers simultaneously.
What should the architect configure with Link Load balancing (LLB) to meet this requirement?**A.** Resilient deployment mode**B.** Mac-based forwarding option enabled.**C.** Backup route**D.** Net Profile**Answer: C**

NEW QUESTION: 3Your network contains multiple VLANs. You have a SharePoint Server 2019 farm that contains a Microsoft SQL Server Always On availability group. Each SQL Server instance is in a separate VLAN. You need to modify the database replication settings for the SQL Server instances to minimize network latency. How should you complete the PowerShell script? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.**Answer:** Explanation:
