You need to configure account1 to meet the following requirements: * Ensure that you can upload the disk files to account1. * Ensure that you can attach the disks to VM1. * Prevent all other access to account1. Which two actions should you perform? Each correct selection presents part of the solution. NOTE: Each correct selection is worth one point. **A.** From the Firewalls and virtual networks blade of account1, select Allow trusted Microsoft services to access this storage account. **B.** From the Firewalls and virtual networks blade of account1, add the 131.107.1.0/24 IP address range. **C.** From the Firewalls and virtual networks blade of account1, add VNet1. **D.** From the Service endpoints blade of VNet1, add a service endpoint. **E.** From the Firewalls and virtual networks blade of account1, select Selected networks. **Answer: D,E** Explanation: **B:** By default, storage accounts accept connections from clients on any network. NEW QUESTION: 3 Refer to the exhibit. Which statement is true? **A.** IPv6 unicast routing is not

enabled on this router.**B.** IPv6 traffic can be forwarded from this router, but only on Ethernet1/0.**C.** There is no issue with forwarding IPv6 traffic from this router.**D.** Some IPv6 traffic will be blackholed from this router.**Answer: D**Explanation:Here we see that the IPV6 default route shows two different paths to take, one via Ethernet 1/0 and one via Ethernet 0/0. However, only Eth 1/0 shows a next hop IPV6 address (the link local IPV6 address). There is no link local next hop addressed known on Eth 0/0. Therefore, traffic to all destinations will be load balanced over the two paths, but only half of the IPv6 traffic will be sent to the correct upstream router.
