NEW QUESTION: 1Scenario: A XenApp administrator has been tasked with building XenApp servers as generically as possible. Other than the operating system, required updates, patches and anti-virus software, the servers are to be kept as identical as possible to allow for quick disaster recovery should the need arise. Bandwidth is restricted and the client machines run operating systems other than Windows. Therefore, streaming applications to the client machines is NOT possible. Which setting must the administrator select when publishing the application?
A. Streamed to client
B. Accessed from a server, streamed to server
C. Accessed from a server, installed application
D. Streamed if possible, otherwise accessed from a server

Answer: B

A. One Message Store Server supports up to 600 user mailboxes and you can have 5 active + 1 Redundant Application Servers in a cluster.
B. One Message Store Server supports up to 60000 user mailboxes and you can have 5 active + 1 Redundant Application Servers in a cluster.
C. One Message Store Server supports up to 6000 user mailboxes and you can have 3 active + 1 Redundant Application Servers in a cluster.
D. One Message Store Server supports up to 1000 user mailboxes and you can have 3 active + 1 Redundant Application Servers in a cluster.
Answer: C
Explanation: Dedicated AxC/Directory server: A physical server that manages notification capabilities and the LDAP database and provides communications between application servers and the thirdparty storage server. This server also stores user properties and name and greeting recordings. Not all configurations require a dedicated AxC/Directory server because the AxC/Directory role runs on the Avaya-provided message store. You only need a dedicated AxC/Directory server for:
