The Kit for Dell Certification includes Estruturit for Dell Certification and Estruturit-Max for Dell D-HCIAZ-A-01.

NEW QUESTION: 1You are developing a solution for a hospital to support the following use cases:
*The most recent patient status details must be retrieved even if multiple users in different locations have updated the patient record.
*Patient health monitoring data retrieved must be the current version or the prior version.
*After a patient is discharged and all charges have been assessed, the patient billing record contains the final charges.
You provision a Cosmos DB NoSQL database and set the default consistency level for the database account to Strong. You set the value for Indexing Mode to Consistent. You need to minimize latency and any impact to the availability of the solution. You must override the default consistency level at the query level to meet the required consistency guarantees for the scenarios. Which consistency levels should you implement? To answer, drag the appropriate consistency levels to the correct requirements. Each consistency level may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.
Answer: Explanation: Explanation
Box 1: Strong
Strong: Strong consistency offers a linearizability guarantee. The reads are guaranteed to return the most recent committed version of an item. A client never sees an uncommitted or partial write. Users are always guaranteed to read the latest committed write.
Box 2: Bounded staleness
Bounded staleness: The reads are guaranteed to honor the consistent-prefix guarantee. The reads might lag behind writes by at most "K" versions (that is "updates") of an item or by "t" time interval. When you choose bounded staleness, the "staleness" can be configured in two ways:
The number of versions (K) of the item
The time interval (t) by which the reads might lag behind the writes
Box 3: Eventual
Eventual: There's no ordering guarantee for reads. In the absence of any further writes, the replicas eventually converge.

NEW QUESTION: 2An administrator notices that one virtual machine is in an orphaned state. What are two reasons that a virtual machine can appear as orphaned? (Choose two.)
A. The user does not have privilege to access the virtual machine.
B. The ESXi host is disconnected.
C. The

virtual machine was unregistered directly on the host.**D.** A VMware High Availability host failure has occurred.**Answer: C,D**

NEW QUESTION: 3A company is considering the issue of a convertible bond compared to a straight bond issue (non-convertible bond). Director A is concerned that issuing a convertible bond will upset the shareholders for the following reasons: * it will dilute their control * the interest payments will be higher therefore reducing liquidity * it will increase the gearing ratio therefore increasing financial risk Director B disagrees, and is preparing a board paper to promote the issue of the convertible bond rather than a non-convertible. Advise the Director B which THREE of the following statements should be included in his board paper to promote the issue of the convertible bond?**A.** The coupon rate on the convertible bond will be lower than that on a non-convertible bond.**B.** Over the life of the bond, a convertible will be more expensive than a non-convertible.**C.** Issuing a convertible bond will have a more favourable impact on the gearing ratio than a non-convertible bond.**D.** When converted into shares, the company will receive a cash inflow which can be used for future investments.**E.** The convertible bond may not dilute control as the bond holder has an option to choose conversion.**Answer: A,C,E**
