NEW QUESTION: 1The risk manager at a small bank wants to use quantitative analysis to determine the ALE of running a business system at a location which is subject to fires during the year. A risk analyst reports to the risk manager that the asset value of the business system is \$120,000 and, based on industry data, the exposure factor to fires is only 20% due to the fire suppression system installed at the site. Fires occur in the area on average every four years. Which of the following is the ALE?**A. \$24,000B. \$30,000C. \$96,000D. \$6,000****Answer: D**

Explanation:ExplanationSingle Loss Expectancy (SLE) is mathematically expressed as: Asset value (AV) x Exposure Factor (EF) SLE = AV x EF = \$120 000 x 20% = \$ 24,000 (this is over 4 years)

Thus ALE = \$ 24,000 / 4 = \$ 6,000 References:
