**NEW QUESTION: 1**ポートセキュリティ機能の2つの制限のうち、正しいものはどれですか？  
(2つ選択してください。) **A.**

単一のデバイスは、最大3つのスティッキーMACアドレスを学習できます。 **B.**

PVLANポートではサポートされていません。 **C.** 宛先SPANポートでサポートされています。 **D.**

EtherChannelポートチャネルインターフェイスではサポートされていません。 **E.**

静的ポートMACアドレスの割り当てはサポートされていません。 **Answer: D, E**  
**Explanation:** Follow these guidelines when configuring port security: \* You cannot enable port security on dynamic access ports. \* You cannot enable port security on EtherChannels. \* A secure port cannot be a destination port for the Switch Port Analyzer (SPAN). \* A secure port cannot belong to an EtherChannel port-channel interface. \* A secure port and a static MAC address configuration for an interface are mutually exclusive. \* When you enter a maximum secure address value for an interface, and the new value is greater than the previous value, the new value overwrites the previously configured value. If the new value is less than the previous value and the number of configured secure addresses on the interface exceeds the new value, the command is rejected. \* While configuring trunk port security on a trunk port, you do not need to account for the protocol packets (like CDP and BPDU) because they are not learned and secured. \* You cannot enable port security aging on sticky secure MAC addresses. \* To restrict MAC spoofing using port security, you must enable 802.1X authentication. \* You cannot configure port security on dynamic ports. You must change the mode to access before you enable port security.

**NEW QUESTION: 2** Drag and drop the characteristics from the left onto the routing protocols they describe on the right. **Answer:** Explanation: Explanation EIGRP maintains alternative loop-free backup via the feasible successors. To qualify as a feasible successor, a router must have an Advertised Distance (AD) less than the Feasible distance (FD) of the current successor route. Advertised distance (AD): the cost from the neighbor to the destination. Feasible distance (FD): The sum of the AD plus the cost between the local router and the next-hop router

**NEW QUESTION: 3** A system administrator wants to know if the email traffic from a remote partner will active special treatment message filters that are created just for them . Which tool on the Cisco Email Security gateway can you use to debug and emulate the flow that a message takes through the work queue? **A.** the message tracker interface **B.** the CLI grep command **C.** the trace tool **D.** the CLI find event command **E.** centralized or local message tracking **Answer: C**

**NEW QUESTION: 4** **A.** Option **A** **B.** Option **D** **C.** Option **C** **D.** Option **E** **E.** Option **B** **F.** Option **F**  
**Answer: B, E**  
**Explanation:** Explanation If the switch already has the MAC address in its table for

the destination, it will forward the frame directly to the destination port. If it was not already in its MAC table, then they frame would have been flooded out all ports except for the port that it came from.
