NEW QUESTION: 1Which of the following provides the BEST application availability and is easily expanded as demand grows?**A.** Server virtualization**B.** Load balancing**C.** RAID 6**D.** Active-Passive Cluster**Answer: B****Explanation:**Load balancing is a way of providing high availability by splitting the workload across multiple computers.**Incorrect Answers:**A. Virtualization is the foundation for cloud computing. You cannot have cloud computing without virtualization. It makes it possible by abstracting the hardware and making it available to the virtual machines. The abstraction is done through the use of a hypervisor, which can be either Type I (bare metal) or Type II (hosted).C. Active-Passive cluster will provide application availability, but is not as easily expanded as load balancing.D. RAID or redundant array of independent disks (RAID). RAID allows your existing servers to have more than one hard drive so that if the main hard drive fails, the system keeps functioning.**References:**Dulaney, Emmett and Chuck Eastton, CompTIA Security+ Study Guide, 6th Edition, Sybex, Indianapolis, 2014, pp. 234-235

NEW QUESTION: 2**A.** Option C**B.** Option A**C.** Option E**D.** Option B**E.** Option D**Answer: B****Explanation:**Storm control prevents traffic on a LAN from being disrupted by a broadcast, multicast, or unicast storm on a port. A LAN storm occurs when packets flood the LAN, creating excessive traffic and degrading network performance. Errors in the protocol-stack implementation, mistakes in network configuration, or users issuing a denial-of-service attack can cause a storm. Storm control is configured for the switch as a whole but operates on a per-port basis. By default, storm control is disabled. Storm control uses rising and falling thresholds to block and then restore the forwarding of broadcast, unicast, or multicast packets. You can also set the switch to shut down the port when the rising threshold is reached.**Reference:**http://www.cisco.com/c/en/us/td/docs/switches/lan/catalyst2950/software/release/12-1_22ea/SCG/scg/swtrafc.html

NEW QUESTION: 3 Which of the following criteria is used to determine the proper classification of a data object? (Choose three) **A.** Useful life **B.** Value **C.** Age **D.** Sensitivity **E.** Storage cost
Answer: A,B,C Explanation: The criterion used to value information includes: personal association, useful life, value, and age.

NEW QUESTION: 4 Where should the write cache be placed for the XenApp servers using the two Standard Image mode vDisks? **A.** The write cache should be placed on the Provisioning Services server as local storage. **B.** The write cache should be placed on the target device RAM. **C.** The write cache should be placed on the Provisioning Services server as shared storage on the HP SAN. **D.** The write cache should be placed on the target device hard drive as shared storage on the HP SAN. **Answer: B**
