NEW QUESTION: 1Scenario: A Citrix Administrator uses Machine Creation Services to provision Desktop OS machines in an environment. The administrator needs to update an application that is locally installed on the Desktop OS machines.Which action should the administrator take after updating the application to ensure that users are provided with the updated application?**A.** Update the Desktop OS machines, then update the appropriate session machine catalog.**B.** Update the session machine catalog, then update the Delivery Group.**C.** Update the master image, then update the appropriate session machine catalog.**D.** Update the master image, then update the Delivery Group.**Answer: C**

NEW QUESTION: 2Your company has an Active Directory domain. All servers run Windows Server.You deploy a Certification Authority (CA) server.You create a new global security group named CertIssuers.You need to ensure that members of the CertIssuers group can issue, approve, and revoke certificates.What should you do?**A.** Run the certsrv -add CertIssuers command prompt of the certificate server**B.** Run the add -member-membertype memberset CertIssuers command by using Microsoft Windows Powershell**C.** Place CertIssuers group in the Certificate Publisher group**D.** Assign the Certificate Manager role to the CertIssuers group
Answer: D

NEW QUESTION: 3Given the following figures for the testing on a project, and assuming the failure rate for initial tests remains constant and that all retests pass, what number of tests remain to be run? 3 credits**A. 0B. 1C. 2D. 3Answer: C**

NEW QUESTION: 4Which of the following is not a key function of an identity management system?**A.** password maintenance and self-service**B.** user provisioning**C.** authentication**D.** LDAP integration**E.** approval workflow**Answer: A, C**Explanation:Explanation/Reference: Incorrect answers:A: Identity Management (IdM) includes the capability to store, manage, synchronize, provision, administer, and audit security data related to user identity.C: Identity provisioning may include workflow processes to handle activities such as the creation of new users, requests for additional access, the removal of users, and password resets. Workflow processes help by adding structure to the activities. They allow ordinary users to initiate provisioning processes which may trigger corresponding approval processes that involve the appropriate levels of management D: Security data is most frequently stored in an LDAP directory.Note:Identity provisioning includes activities such as:*The creation of directory entries for users* Assigning attributes, roles, and privileges to users* Setting and resetting passwords* Altering attributes, roles, and privileges as job functions and organizations change*

Altering security data based on changes to the IT landscape, e.g., the addition of new computing resources that require new attributes and entitlements, or the removal of legacy systems and associated security data* Removing users in a timely manner when they leave the company or should no longer have access to resources* Ensuring that accounts and privileges are correct and consistent across the enterprise* Detecting accounts that are created outside of normal channels (rogue accounts) and sending alerts when such accounts are detected* Automating repeatable administration tasksReference: Oracle Reference Architecture, Security , Release 3.1
