NEW QUESTION: 1 A plan for managing the end of a supplier contract should be created when?
A. The contract is being negotiated
B. The contract has been agreed
C. The Supplier Manager decides that there is a risk the contract might need to end soon
D. The contract is about to be ended
Answer: A

NEW QUESTION: 2 Your network contains an Active Directory domain named contoso.com. The domain contains an Application server named Server1. Server1 runs Windows Server 2012. Server1 is configured as an FTP server. Client computers use an FTP Application named App1.exe. App1.exe uses TCP port 21 as the control port and dynamically requests a data port. On Server1, you create a firewall rule to allow connections on TCP port 21. You need to configure Server1 to support the client connections from App1.exe. What should you do?
A. Create a tunnel connection security rule.
B. Create an outbound firewall rule to allow App1.exe.
C. Run netsh advfirewall set global statefulftp enable.
D. Run netsh firewall addportopening TCP 21 dynamicftp.
Answer: C
Explanation:

http://technet.microsoft.com/en-us/library/cc771920%28v=ws.10%29.aspx#BKMK_set_2aThe netsh firewall context is supplied only for backward compatibility. We recommend that you do not use this context on a computer that is running Windows Vista or a later version of Windows. In the netsh advfirewall firewall context, the add command only has one variation, the add rule command. Netsh advfirewall set global statefulftp: Configures how Windows Firewall with Advanced Security handles FTP traffic that uses an initial connection on one port to request a data connection on a different port. When statefulftp is enabled, the firewall examines the PORT and PASV requests for these other port numbers and then allows the corresponding data connection to the port number that was requested. Syntax: set global statefulftp { enable | disable | notconfigured } Parameters: statefulftp can be set to one of the following values: enable The firewall tracks the port numbers specified in PORT command requests and in the responses to PASV requests, and then allows the incoming FTP data traffic entering on the requested port number. disable This is the default value. The firewall does not track outgoing PORT commands or PASV responses, and so incoming data connections on the PORT or PASV requested port is blocked as an unsolicited incoming connection. notconfigured Valid only when netsh is configuring a GPO by using the set store command.

NEW QUESTION: 3 You plan to mount the contents of a backup before performing a restore using the vSphere Client. Which two steps are mandatory in the process of mounting the contents of a backup? (Choose two.)
A. navigate to the SnapManager for VI Restore window and

select the backup you want to mount **B.** in the SnapManager for VI Restore window, click the Mount button **C.** click the Share button to create a shared resource **D.** supply the ESX Host IP address to mount the backup **E.** navigate to NetApp System Manager and create a share for the secondary volume **Answer: C,E**
