Our specialists have triumphantly developed the three versions of the CCZT learning materials.

**NEW QUESTION: 1** Refer to the exhibit. A network engineer is configuring OSPF between router R1 and router R2. The engineer must ensure that a DR/BDR election does not occur on the Gigabit Ethernet interfaces in area 0. Which configuration set accomplishes this goal? A) B) C) D) **A.** Option A **B.** Option B **C.** Option C **D.** Option D **Answer: A**

**NEW QUESTION: 2** A. Option B **B.** Option C **C.** Option D **D.** Option A **Answer: B** Explanation: From the output shown below of the HSRP status of DSW2, we see that the active router has a priority of 200, while the local priority is 190. We need to increase the priority of DSW2 to greater than 200, but it should be less than 250 so that if the gig 1/0/1 interface goes down, DSW1 will become active. DSW2 is configured to decrement the priority by 50 if this interface goes down, so the correct answer is to increase the priority to more than 200, but less than 250.

**NEW QUESTION: 3** A technician is configuring wireless for a home office. The customer wants to prevent others from accessing the wireless network. The customer has a small number of devices on the network and does not want to have to remember a complicated password. Which of the following should the technician recommend? **A.** Disable SSID broadcast **B.** Assign static IP addresses **C.** Enable MAC filtering **D.** Turn on content filtering **Answer: C**
