NEW QUESTION: 1 Which three statements about Automatic Database Diagnostic Monitor (ADDM) are true? **A.** It analyzes the snapshots stored in the Automatic Workload Repository (AWR). **B.** It implements all recommendations automatically. **C.** It analyzes the performance of specified objects. **D.** It requires the database to be open. **E.** It recommends solutions and quantifies expected benefits. **F.** It retains snapshots in the SYSAUX tablespace until the database is restarted. **Answer: A,C,E** Explanation: Reference: http://docs.oracle.com/cd/B19306_01/server.102/b14211/diagnosis.htm

NEW QUESTION: 2 **A.** Yes **B.** No **Answer: A**

NEW QUESTION: 3 Cisco Wireless LAN

Controllerへの接続が失われた後、引き続きワイヤレスクライアントにサービスを提供する統合アクセスポイントモードはどれですか。 **A.** スニファーマ **B.** ローカル **C.** フレックス接続 **D.** メッシュ

Answer: C Explanation: In previous releases, whenever a FlexConnect access point disassociates from a controller, it moves to the standalone mode. The clients that are centrally switched are disassociated. However, the FlexConnect access point continues to serve locally switched clients. When the FlexConnect access point rejoins the controller (or a standby controller), all clients are disconnected and are authenticated again. This functionality has been enhanced and the connection between the clients and the FlexConnect access points are maintained intact and the clients experience seamless connectivity. When both the access point and the controller have the same configuration, the connection between the clients and APs is maintained. Reference:
