We are UK based company, selling practice test questions answers, Our C-S4CPR-2408 study materials have plenty of advantages.

**NEW QUESTION: 1**A company has released a new version of a website to target an audience in Asia and South America. The website's media assets are hosted on Amazon S3 and have an Amazon CloudFront distribution to improve end-user performance. However, users are having a poor login experience the authentication service is only available in the us-east-1 AWS Region. How can the Solutions Architect improve the login experience and maintain high security and performance with minimal management overhead?**A.** Replicate the setup in each geography and use Network Load Balancers to route traffic to the authentication service running in the closest region to users. There are several benefits to using Lambda@Edge for authorization operations. First, performance is improved by running the authorization function using Lambda@Edge closest to the viewer, reducing latency and response time to the viewer request. The load on your origin servers is also reduced by offloading CPU-intensive operations such as verification of JSON Web Token (JWT) signatures. Finally, there are security benefits such as filtering out unauthorized requests before they reach your origin infrastructure.

<https://aws.amazon.com/blogs/networking-and-content-delivery/authorization-edge-how-to-use-lambda-edge-and-json-web-tokens-to-enhance-web-application-security/>**B.** Use an Amazon Route 53 weighted routing policy to route traffic to the CloudFront distribution. Use CloudFront cached HTTP methods to improve the user login experience.**C.** Use Amazon Lambda@Edge attached to the CloudFront viewer request trigger to authenticate and authorize users by maintaining a secure cookie token with a session expiry to improve the user experience in multiple geographies.**D.** Replicate the setup in each new geography and use Amazon Route 53 geo-based routing to route traffic to the AWS Region closest to the users.**Answer: C**

**NEW QUESTION: 2****Answer:** Explanation: Explanation Box 1: Azure on-premises data gateway The on-premises data gateway acts as a bridge, providing secure data transfer between on-premises data sources and your Azure Analysis Services servers in the cloud. Box 2: Azure App Service with Hybrid Connections Within App Service, Hybrid Connections can be used to access application resources in other networks. The Hybrid Connections feature requires a relay agent in the network that hosts your Hybrid Connection endpoint. That relay agent is called the Hybrid Connection Manager (HCM). Box 3: Azure Relay service The Azure Relay service enables you to securely expose services that run in your corporate network to the public cloud. You can do so without opening a firewall connection, or making intrusive changes to your corporate network infrastructure.

**NEW QUESTION: 3A. Option AB. Option DC. Option BD. Option C**  
**Answer: A**  
**Explanation:**When assigning a license to a user, you are able to select which services are enabled by that license. Select the down-arrow next to the name of the license and unselect the services that you want to restrict from that user. The Office 365ProPlus check box was probably de-selected, therefore the user was unable to install it.
