NEW QUESTION: 3Note: This question is part of a series of questions that present the same scenario. Each question on the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You are planning to create a virtual network that has a scale set that contains six virtual machines (VMs).A monitoring solution on a different network will need access to the VMs inside the scale set.You need to define public access to the VMs.Solution: Design a scale set to automatically assign public IP addresses to all VMs.Does the solution meet the goal?**A.** Yes**B.** No**Answer: B**
Explanation:Explanation/Reference:All VMs do not need public IP addresses.Public IP addresses are necessary because they provide the load balanced entry point for the virtual machines in the scale set. The public IP address will route traffic to the appropriate virtual machines in the scale set.Reference:
