Answer: C

This results in the slow connection. The radio waves are travelling at the same rate, but as a result of signal bounce, it's taking longer to reach its destination.

NEW QUESTION: 3 Which of the following wireless security technologies continuously supplies new keys for WEP?
A. Mac filtering **B.** WPAC **C.** TKIP **D.** WPA2
Answer: C
Explanation: TKIP is a suite of algorithms that works as a "wrapper" to WEP, which allows users of legacy WLAN equipment to upgrade to TKIP without replacing hardware. TKIP uses the original WEP programming but "wraps" additional code at the beginning and end to encapsulate and modify it.
Incorrect Answers: B. Networks can use MAC address filtering, only allowing devices with specific MAC addresses to connect to a network. It does not continuously supply new keys for WEP. C. WPA2 makes use of Counter Mode with Cipher Block Chaining Message Authentication Code Protocol (CCMP) and is a more secure standard than WEP or WPA. D. WPA replaces WEP, and also uses TKIP.
