NEW QUESTION: 1You have an application running on Oracle Cloud Infrastructure. You identified that the read and write operations are slowing your application down enough to impair user access. The application is currently using a VM.Standard 1.2 compute without any block storage attached to it. Which two options allow you to increase disk performance? (Choose two.)
A. Create a backup of the boot volume. Create a new compute instance using a VM Dense IO shape and restore the backup.
B. Terminate the compute instance and create a backup of the boot volume. Create a new compute instance using a VM Dense IO shape and restore the backup.
C. Terminate the compute instance preserving the boot volume. Create a new compute instance using a VM Dense IO shape using the boot volume preserved.
D. Terminate the compute instance preserving the boot volume. Create a new compute instance using a VM Standard shape and attach a new block volume to host your application.
Answer: C, D
Explanation: You can permanently terminate (delete) instances that you no longer need. By default, the instance's boot volume is deleted when you terminate the instance, however you can preserve the boot volume associated with the instance, so that you can attach it to a different instance as a data volume, or use it to launch a new instance. You can use a boot volume backup to create an instance or you can attach it to another instance as a data volume. However before you can use a boot volume backup, you need to restore it to a boot volume.

NEW QUESTION: 2 Which two statements about class maps are true? (Choose two.)
A. An maximum of eight DSCP values can be included in a match dscp statement.
B. The match class command can nest a class map within another class map.
C. A policy map can be used to designate a protocol within a class map.
D. The default parameter on a class map with more than one match command is match-any.
Answer: A, B
Explanation: Answer A. Router(config-cmap)# match[ip] dscp (Optional) Identifies a specific IP dscp-value[dscp-value dscp-value differentiated service code point (DSCP)dscp-value dscp-value dscp-value value as a match criterion. Up to eight DSCP dscp-value dscp-value] values can be included in one match statement. Answer C. Router config-cmap)# (Optional) Specifies the name of a traffic class to be used match class-map class- as a matching criterion (for routing traffic class [named name class map] within one another).
