The need to merge unrelated code makes even minor code changes expensive. Requirements  
Planned Changes Litware plans to develop a new suite of applications for investment planning.  
The investment planning Applications will require only minor integration with the existing  
retirement fund management system. The investment planning applications suite will include  
one multi-tier web application and two iOS mobile applications. One mobile application will be  
used by employees; the other will be used by customers. Litware plans to move to a more agile  
development methodology. Shared code will be extracted into a series of packages. Litware has  
started an internal cloud transformation process and plans to use cloud based services  
whenever suitable. Litware wants to become proactive in detecting failures, rather than always  
waiting for customer bug reports. Technical Requirements The company's investment planning  
applications suite must meet the following technical requirements: \* New incoming  
connections through the firewall must be minimized. \* Members of a group named Developers  
must be able to install packages. \* The principle of least privilege must be used for all  
permission assignments \* A branching strategy that supports developing new functionality in  
isolation must be used. \* Members of a group named Team leaders must be able to create new  
packages and edit the permissions of package feeds \* Visual Studio App Center must be used to  
centralize the reporting of mobile application crashes and device types in use. \* By default, all  
App Center must be used to centralize the reporting of mobile application crashes and device  
types in use. \* Code quality and release quality are critical. During release, deployments must  
not proceed between stages if any active bugs are logged against the release. \* The mobile  
applications must be able to call the share pricing service of the existing retirement fund  
management system. Until the system is upgraded, the service will only support basic  
authentication over HUPS. \* The required operating system configuration for the test servers  
changes weekly. Azure Automation State Configuration must be used to ensure that the  
operating system on each test server is configured the same way when the servers are created  
and checked periodically. Current Technical The test servers are configured correctly when first  
deployed, but they experience configuration drift over time. Azure Automation State  
Configuration fails to correct the configurations. Azure Automation State Configuration nodes  
are registered by using the following command.
