http://www.cisco.com/c/dam/en/us/td/docs/telepresence/infrastructure/vcs/config_guide/X8-2/Cisco-VCS-IP-Port-Usage-for-Firewall-Traversal-Deployment-Guide-X8-2.pdf Exp: Task 9:

Configuring the Traversal Zone The traversal zone configuration defines a connection between the VCS Control and VCS Expressway platforms. ■ A traversal zone connection allows firewall traversal for signaling and media between the two platforms. ■ The VCS Control is configured with a traversal client zone, and the VCS Expressway with a traversal server zone. To configure the traversal zone: 1. Go to Configuration > Zones > Zones. 2. Click New. 3. Configure the fields as follows (leave all other fields with default values): 4. click create zone. Exp2: D = Zones > Traversal Zone > H.323 port, typically 6001 for first traversal zone, 6002 for second etc.

NEW QUESTION: 2 Note: This question is part of a series of questions that present the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenarios is exactly the same in each question in this series. You are developing a Master Data Management (MDM) solution for a company by using Microsoft SQL Server Integration Services (SSIS), SQL Server Master Data Services (MDS), and SQL Server Data Quality Services (DQS). You have an MDS model named Geography that contains the entities described in the following table. You define a domain-based attribute in the State entity that references the CountryRegion entity. You define another domain-based attribute in the city entity that references the State and CountryRegion entities. A single derived hierarchy named Geography supports navigation between the CountryRegion, State, and City levels. Subscription views exist for all entities. The subscription views have the same name as the entity on which they are based. You initialize each entity member. New City entity members are imported daily based on customer city values in a Customer Relationship Management (CRM) database. The CRM database is a SQL Server relational database. When new cities are imported from the CRM database, the state codes must be standardized to those already defined in the State entity. In the CRM database, sales managers are assigned to countries/regions. A sales manager may be assigned to one or more countries/regions. A country/region may have one or more assigned sales managers. The CRM database contains a table named ManagerCountryRegion that stores a row for each manager-country/region relationship. You create the following MDS users and map each user to an Active Directory Domain Services (AD DS) user account: User1, User2, and User3. Both User1

and User2 belong to the Explorer functional area. Users must be able to complete the tasks described in the following table. You need to add a top level to the Geography hierarchy to navigate from manager to CountryRegion. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. **Answer:** Explanation: Explanation Derived hierarchies come from the relationships between entities in a model. These are domain-based attribute relationships. A domain-based attribute contains values that are populated by members from an entity and can be used as attribute values for other entities. NEW QUESTION: 3 A prospect's business is growing 100% year over year. The prospect is interested in Nutanix for their main datacenter due to the ability to scale quickly and easily. They have three remote sites that will be refreshed within the next year. Each site needs to replicate to their main datacenter. The SE proposes the Nutanix NX line, and the prospect asks to utilize the Xpress line. For which reason is the Xpress line the wrong choice? (Choose two) **A.** SX is limited to one 4-node cluster. **B.** SX licensing will not support many-to-many-cluster replication. **C.** SX licensing does not support cluster-to-cluster replication. **D.** SX is limited to two 4-node clusters. **E.** SX has a lower services cost for installation. **Answer: B,D**
