NEW QUESTION: 2A. Option CB. Option BC. Option DD. Option A**Answer: D**Explanation:Open Shortest Path First http://en.wikipedia.org/wiki/Open_Shortest_Path_FirstThe configuration of R1 shows "router ospf 1" however, the diagram also shows that both routers should be in the backbone OSPF Area of "0". When routers are in different OSPF areas they will not form a neighbor relationship. Neighbor relationships As a link state routing protocol, OSPF establishes and maintains neighbor relationships in order to exchange routing updates with other routers. The neighbor relationship table is called an adjacency database in OSPF. Provided that OSPF is configured correctly, OSPF forms neighbor relationships only with the routers directly connected to it. In order to form a neighbor relationship between two routers, the interfaces used to form the relationship must be in the same area. Generally an interface is only configured in a single area, however you can configure an interface to belong to multiple areas. In the second area, such an interface must be configured as a secondary interface. (A neighbor state simulation shows how neighbor state changes from Down to Full Adjacency progressively with exchanging Hello, DD, Request, Update, and Ack packets).

NEW QUESTION: 3You administer a company's SharePoint Online environment. The environment hosts several site collections that are used to store documents that contain sensitive customer information.A user in the customer relationship department must share a document that contains scheduling and project information with multiple external vendors. The document contains scheduling and project information.You need to ensure that the external vendors can access and collaborate on the document.What should you do?**A.** Share the site containing the collaboration document and require sign-in.**B.** Share the document and require sign-in.**C.** Share the document and do not require sign-in.**D.** Create a document library for the document and require sign-in.**Answer: B**
