To satisfy your curiosity of our NSE5_FSM-6.3 download pdf, we provided some demos for free for your reference, First of all, our NSE5_FSM-6.3 study materials are constantly being updated [C_THR82_2405 Practice Exam Questions](#) and improved so that you can get the information you need and get a better experience.

So you can buy our NSE5_FSM-6.3 valid practice questions without any misgivings, Our Newly updated NSE5_FSM-6.3 study material that would make you prepares yourself in a very short time.

Doing the one certification requires you to go for the next one, With our NSE5_FSM-6.3 exam questions, you will pass the exam with ease.

NEW QUESTION: 1Your network contains a domain controller that is configured as a DNS server. The server hosts an Active Directory-integrated zone for the domain.You need to reduce how long it takes until stale records are deleted from the zone. What should you do?**A.** From the configuration directory partition of the forest, modify the tombstone lifetime.**B.** From the configuration directory partition of the forest, modify the garbage collection interval.**C.** From the aging properties of the zone, modify the no-refresh interval and the refresh interval.**D.** From the start of authority (SOA) record of the zone, modify the refresh interval and the expire interval.**Answer: C**Explanation:Explanation/Reference:Explanation:Scavenging automates the deletion of old records. When scavenging is enabled, then you should also change the no-refresh and refresh intervals of the aging properties of the zone else it may take too long for stale records to be deleted and the size of the DNS database can become large and have an adverse effect on performance.

NEW QUESTION: 2A customer reports that a LUN is offline because the volume is out of space even though the space-reserve parameter is configured to enabled on the LUN.Which two statements are correct in this scenario? (Choose two.)**A.** The containing aggregate is thin-provisioned.**B.** The fractional reserve is set to 0%.**C.** Deduplication is inflating the LUN when it is brought online.**D.** The volume has snapshots.**Answer: A,D**

NEW QUESTION: 3Which attribute is required when configuring a View Security Server Pairing Password?**A.** Password timeout value**B.** Password complexity value**C.** Password length value**D.** Password expiration value**Answer: A**

NEW QUESTION: 4DRAG DROPDRAG DROP**Answer:** Explanation:Explanation:Box 1: Create a service namespaceThe first step is to create an ACS Namespace. This is your Security Token Services (STS) that will generate Signed Identity tokens to be consumed by WAP. This will also be the onlySTS that WAP will trust.Box 2: Register the application as a relaying partner.Now that the Namespace is created, you will have to tell it about the WAP Portals that is expecting tokens from it. We add the WAP Tenant Portal as a Relying Party to ACS(Access Control

Services).Box 3: Add a Security Token Service (STS) reference in Visual Studio 2012.Now that the Namespace is created, you will have to tell it about the WAP Portals that is expecting tokens from it.1. Click on Relying Party Applications and click on Add to add the Windows Azure Pack tenant Portal as a Relying Party to this namespace. This essentially tells the ACS namespace that the Tenant Portal is expecting it to provide user identities.2 . You will now go to the Add Relying Party Application page where you can enter details about the WAP tenant Portal.3 . The easier option is to provide the federation Metadata from the tenant portal. Save theXML file locally on your computer4 . Now back in the ACS management portal, Upload the federation metadata file and provide a Display Name for the Relying Party.5 . Scroll Down to the Token Format section and choose the token format to be 'JWT'. ByDefault, the Windows Live Identity Provider will be selected. Deselect it if you do not want to allow users to sign in using their Live id. Under the Token Signing Settings section, select X.509 Certificate as the Type. Click on Save.

Box 4: Add the third-party as the identity provider.We have our ACS and WAP portals setup. We now have to find a source of Identities that can be flown in to the WAP Portals through ACS. We configure external services to act asidentity ProvidersBox 5: Generate provider rules for claims We now have our Relying Party and our Identity Providers set up. We should now tell ACS how to transform the incoming Claims from these Identity providers so that the RelyingParty can understand it. We do that using Rule Groups which are a set of rules that governClaim Transformation. Since, we have two identity Providers, we will have to create a rule for each of these.References: <https://blogs.technet.microsoft.com/privatecloud/2014/01/17/setting-up-windows-azure-active-directory-acs-to-provide-identities-to-windows-azure-pack/>
