We also offer a year of free updates, For most users, access to the relevant [300-425](#) qualifying examinations may be the first, so many of the course content related to qualifying examinations are complex and arcane.

**NEW QUESTION: 1**A. Option B B. Option D C. Option A D. Option C **Answer: C** Explanation: By default, UDLD is disabled on all interfaces. We can enable UDLD globally on the device, or individually on specific interfaces with the command `udld port`. This enables UDLD in normal mode. It would be prohibitively difficult to coordinate the configuration of UDLD on both ends of a link at the same time, so when UDLD is first enabled and does not detect a neighbor the link state is considered unknown, which is not necessarily an error condition. The port will remain operational during this time. When UDLD is finally enabled on the other end, the status will transition to bidirectional. Reference: <http://packetlife.net/blog/2011/mar/7/udld/>

**NEW QUESTION: 2** How do you define Event Reasons as country specific? There are 3 correct answers to this question. A. Make a correction to the definition of the Country object B. Create an association with the Destination Object Event Reason Wrapper with Type Composite C. Create an association with the Destination Object with Event Reason Wrapper with v u Type Valid When D. Add the Event Reason to Country records as per your requirements in Manage Data Tool E. Create an association with Destination Object with Event Reason Wrapper with Type Join By Columns **Answer: B,C,E**

**NEW QUESTION: 3** In which order of magnitude (time) is delay/latency measured when you use wide metrics in EIGRP? A. picoseconds B. tens of microseconds C. mamoseconds D. microseconds **Answer: A**
