NEW QUESTION: 1You have an Exchange Server 2013 organization that contains one Client Access server. The Client Access server is accessible from the Internet by using a network address translation (NAT) device.You deploy an additional Client Access server.You also deploy an L4 hardware load balancer between the Client Access servers and the NAT device.After deploying the hardware load balancer, you discover that all of the Exchange Server traffic is directed to a single Client Access server.You need to ensure that the hardware load balancer distributes traffic evenly across both Client Access servers.What should you do?**A.** Configure the Client Access servers to have a second IP address and web site. Create the Exchange virtual directories in the new sites.**B.** Change the default route of the Client Access servers to point to the hardware load balancer.**C.** Configure SSL offloading on the hardware load balancer and the Client Access servers.**D.** Configure the NAT device to pass the original source IP address of all connections from the Internet.**Answer: D**Explanation:Explanation/Reference:Explanation: When using source NAT, the client IP address is not passed to the load balanced server. The insertion of the Client IP address into the header allows the exchange servers to see the IP that made the connection.Level 4 Load Balancer:A load balancer is a server computer with a very specialized operating system tuned to manage network traffic using user-created rules. Enterprises and hosting companies rely on load-balancing devices to distribute traffic to create highly available servicesL4 load balancing is fairly simple, two servers sharing the same IP address. You get redirected to the less- busy server.The most popular Layer 4 load balancing techniques are:round-robinweighted round-robinleast connectionsweighted least connections

NEW QUESTION: 2The Chief Technical Officer (CTO) has been informed of a potential fraud committed by a database administrator performing several other job functions within the company. Which of the following is the BEST method to prevent such activities in the future?**A.** Least Privilege**B.** Job rotation**C.** Separation of duties**D.** Mandatory Vacations**Answer: C**Explanation:Separation of duties means that users are granted only the permissions they need to do their work and no more.More so it means that you are employing best practices. The segregation of duties and separation of environments is a way to reduce the likelihood of misuse of systems or information. A separation of duties policy is designed to reduce the risk of fraud and to prevent other losses in an organization.Incorrect Answers:A. A job rotation policy defines intervals at which employees must rotate through positions. This is so that the

company does not become too dependent on one person.C. A mandatory vacation policy requires all users to take time away from work to refresh. If the company becomes too dependent on one person, they can end up in a real bind if something should happen to that person.D. Least Privilege means giving users only the permissions that they need to do their work and no more.References:Dulaney, Emmett and Chuck Eastton, CompTIA Security+ Study Guide, 6th Edition, Sybex, Indianapolis, 2014,pp 24,25, 26, 153
