All the exam answers are revised to the most accurate, You will stand at a higher starting point than others if you buy our GB0-372-ENU exam braindumps.

#### **NEW QUESTION: 1**

リバースエンジニアリングを実行する場合、次のファイルタイプのうち、ソースコードに最も簡単に逆コンパイルされるのはどれですか？**A. .exe****B. .so****C. .Jar****D. .a****Answer: C**

#### **NEW QUESTION: 2****A. Option C****B. Option D****C. Option B****D. Option A****E. Option E****Answer: A**

Explanation:Whenever a node needs to send data to another node on a network, it must first know where to send it. If the node cannot directly connect to the destination node, it has to send it via other nodes along a proper route to the destination node. A remote network is a network that can only be reached by sending the packet to another router. Remote networks are added to the routing table using either a dynamic routing protocol or by configuring static routes. Static routes are routes to networks that a network administrator manually configured. So R should have static route for the 192.168.1.128.

**NEW QUESTION: 3**You need to recommend a Group Policy strategy to support the company's planned changes. What should you include in the recommendation?**A. Link a Group Policy object (GPO) to the AllComputers OU in each domain.****B. Link a Group Policy object (GPO) to litwareinc.com and configure filtering.****C. Link a Group Policy object (GPO) to each domain.****D. Link a Group Policy object (GPO) to the Boston site.****Answer: D****Explanation:**We link a GPO, which implements folder redirection and deploys App1 for the Boston Users.\* **Scenario:**Implement Folder Redirection in the Boston office only. Deploy an application named Appl to all of the users in the Boston office only.**Topic 4, Northwind Traders****Overview**Northwind Traders is a retail company. The company has offices in Montreal and San Diego. The office in Montreal has 1,000 client computers. The office in San Diego has 100 computers. The computers in the San Diego office are often replaced. The offices connect to each other by using a slow WAN link. Each office connects directly to the Internet.**Existing Environment**Active Directory Environment The network contains an Active Directory forest named northwindtraders.com. The forest contains two domains named northwindtraders.com and west.northwindtraders.com. All servers run Windows Server 2012 R2. All client computers run Windows 7. Each office is configured as an Active Directory site. The site in the Montreal office is named Site1. The site in the San Diego office is named Site2. The forest contains four domain controllers. The domain controllers are configured as shown in the following table. DC1, DC2, and DC3 are writable domain controllers. R0DC1 is read-only domain controller (RODC). All DNS zones are Active

Directory-integrated. All zones replicate to all of the domain controllers. All of the computers in the San Diego office are configured to use RODC1 as their only DNS server. The northwindtraders.com domain contains a Group Policy object (GPO) named GPO1. GPO1 is applied to all of the users in the Montreal office. All of the user accounts for the Montreal users are in the northwindtraders.com domain. All of the user accounts for the San Diego users are in the west.northwindtraders.com domain. Network Environment Site1 contains the member servers in the northwindtraders.com domain shown in the following table. Server1 connects to SAN storage that supports Offloaded Data Transfer (ODX). All virtual hard disks (VHDs) are stored on the SAN. A web application named App1 is installed on Servers. Server3 has a shared folder that contains sales reports. The sales reports are read frequently by the users in both offices. The reports are generated automatically once per week by an enterprise resource planning (ERP) system. A perimeter network in the Montreal office contains two standalone servers. The servers are configured as shown in the following table. The servers in the perimeter network are accessible from the Internet by using a domain name suffix of public.northwindtraders.com. Each administrator has a management computer that runs Windows 8.1. Requirements

Planned Changes Northwind Traders plans to implement the following changes: On Server1, create four virtual machines that run Windows Server 2012 R2. The servers will be configured as shown in the following table. ----- Configure IP routing between Site1 and the network services that Northwind Traders hosts in Windows Azure. Place a domain controller for the northwindtraders.com domain in Windows Azure. Upgrade all of the computers in the Montreal office to Windows 8.1. Purchase a subscription to Microsoft Office 365. Configure a web application proxy on Server6. Configure integration between VMM and IPAM. Apply GPO1 to all of the San Diego users. Connect Site1 to Windows Azure. Technical Requirements Northwind Traders must meet the following technical requirements: --- All virtual machines must use ODX. Users must be able to access App1 from the Internet. GPO1 must not be applied to computers that run Windows 8.1. All DNS zones must replicate only to DC1, DC2, and DC3. All computers must be able to resolve names by using a local DNS server. If a WAN link fails, users must be able to access all of the sales reports. The credentials for accessing Windows Azure must be permanently stored. The on-premises network must be connected to Windows Azure by using Server4. The administrators must be able to manage Windows Azure by using Windows PowerShell. The number of servers and services deployed in the San Diego office must be minimized. Active Directory queries for the objects in the forest must not generate WAN traffic, whenever possible. ----- - - Security Requirements Northwind Traders identifies the following security requirements: -- Ensure that all DNS zone data is encrypted when it is replicated. Minimize the number of permissions assigned to users and administrators, whenever possible. Prevent an Active Directory Domain Services (AD DS) attribute named SSNumber from replicating to Site2. Ensure that users can use their northwindtraders.com user account to access the resources hosted in Office 365. Prevent administrators from being required to re-enter their credentials when they manage Windows Azure from approved management computers. --

**NEW QUESTION: 4** In an organization, the responsibilities for IT security are clearly assigned and enforced and an IT security risk and impact analysis is consistently performed. This represents which level of ranking in the information security governance maturity model? **A.** Repeatable **B.** Managed **C.** Defined **D.** Optimized **Answer: B** Explanation: Explanation Boards of directors and executive management can use the information security governance maturity model to establish rankings for security in their organizations. The ranks are nonexistent, initial, repeatable, defined, managed and optimized. When the responsibilities for IT security in an organization are clearly assigned and enforced and an IT security risk and impact analysis is consistently performed, it is said to be 'managed and measurable.'
