**NEW QUESTION: 2**VPWS/EoMPLS offers which type of Ethernet services as defined by the MEF?  
**A. E-Line B. E-Interworking C. E-Tree D. E-LAN****Answer: A****Explanation:**Explanation/Reference:  
Explanation:\* E-Line is based on a point-to-point Ethernet Virtual Connection. Two E-Line services are defined:- Ethernet Private Line (EPL): A very simple and basic point-to-point service characterized by low frame delay, frame delay variation, and frame loss ratio. No service multiplexing is allowed, and other than a committed information rate (CIR) no class of service (CoS) (Bandwidth Profiling) is allowed.- Ethernet Virtual Private Line (EVPL): A point-to-point service wherein service multiplexing (more than one Ethernet Virtual Connection) is allowed. The individual Ethernet Virtual Circuits can be defined with a rich set of Bandwidth Profiles and Layer 2 Control Protocol Processing methods as defined by the Metro Ethernet Forum.

**NEW QUESTION: 3**Your network contains an Active Directory domain named adatum.com.You have a standard primary zone named adatum.com.You need to provide a user named User1 the ability to modify records in the zone. Other users must be prevented from modifying records in

the zone. What should you do first? **A.** Run the New Delegation Wizard for the zone. **B.** From the properties of the zone, modify the start of authority (SOA) record. **C.** From the properties of the zone, change the zone type. **D.** Run the Zone Signing Wizard for the zone. **Answer: C** Explanation: The Zone would need to be changed to a AD integrated zone When you use directory-integrated zones, you can use access control list (ACL) editing to secure a dnsZone object container in the directory tree. This feature provides detailed access to either the zone or a specified resource record in the zone. For example, an ACL for a zone resource record can be restricted so that dynamic updates are allowed only for a specified client computer or a secure group, such as a domain administrators group. This security feature is not available with standard primary zones. DNS update security is available only for zones that are integrated into Active Directory. After you integrate a zone, you can use the access control list (ACL) editing features that are available in the DNS snap-in to add or to remove users or groups from the ACL for a specific zone or for a resource record. Standard (not an Active Directory integrated zone) has no Security settings: You need to firstly change the "Standard Primary Zone" to AD Integrated Zone: Now there's Security tab: References: <http://technet.microsoft.com/en-us/library/cc753014.aspx> <http://technet.microsoft.com/en-us/library/cc726034.aspx> <http://support.microsoft.com/kb/816101>

**NEW QUESTION: 4** A green lizard can travel from the green cave to the blue cave in 108 minutes; the blue lizard can travel from the blue cave to the green cave in 25% less time. If the green lizard started to travel 7.5 minutes before the blue lizard, how many minutes after the blue lizard, will the green lizard pass the middle line? **A. 6. B. 2. C. 3.5. D. 5.5. E. 4.** **Answer: A** Explanation: Explanation/Reference: Explanation: It takes the green lizard ( $108/2 = 54$ ) minutes to reach the middle. It takes the blue lizard ( $(108 \times 0.75 = 81)/2 = 40.5$ ) minutes to reach the middle. The green lizard started to travel 7.5 minutes ahead of the blue lizard and therefore the differences in the time they reach the middle is  $(54 - 7.5 - 40.5 = 6)$  minutes.
