The CISO is concerned that an unrecognized threat could compromise corporate data and result in regulatory fines as well as poor corporate publicity. The network is mostly flat, with split staff/guest wireless functionality.Which of the following equipment MUST be deployed to guard against unknown threats?**A.** Implementation of an offsite data center hosting all company data, as well as deployment of VDI for all client computing needs.**B.** Behavior based IPS with a communication link to a cloud based vulnerability and threat feed.**C.** Cloud-based antivirus solution, running as local admin, with push technology for definition updates.**D.** Host based heuristic IPS, segregated on a management VLAN, with direct control of the perimeter firewall ACLs.**Answer: B**Explanation: ExplanationGood preventive security practices are a must. These include installing and keeping firewall policies carefully matched to business and application needs, keeping antivirus software updated, blocking potentially harmful file attachments and keeping all systems patched against known vulnerabilities. Vulnerability scans are a good means of measuring the effectiveness of preventive procedures.
