NEW QUESTION: 2 You can update licenses on the Company Profile.**A.** True**B.** False**Answer: B**

NEW QUESTION: 3 You have been asked to install and configure a new switch in a customer network. Use the console access to the existing and new switches to configure and verify correct device configuration. Refer to the configuration. For which configured VLAN are untagged frames sent over trunk between SW1 and SW2? **A.** VLAN 300 **B.** VLAN 50 **C.** VLAN 40 **D.** VLAN 999 **E.** VLAN 1 **F.** VLAN 200 **G.** VLAN 99 **Answer: G** Explanation: The native VLAN is used for untagged frames sent along a trunk. By issuing the "show interface trunk" command on SW1 and SW2 we see the native VLAN is 99.

NEW QUESTION: 4 Two programmers write a new secure application for the human resources department to store personal identifiable information. The programmers make the application available to themselves using an uncommon port along with an ID and password only they know. This is an example of which of the following? **A.** Spyware **B.** Backdoor **C.** Logic Bomb **D.** Root Kit **Answer: B** Explanation: A backdoor in a computer system (or cryptosystem or algorithm) is a method of bypassing normal authentication, securing unauthorized remote access to a computer, obtaining access to plaintext, and so on, while attempting to remain undetected. The backdoor may take the form of an installed program (e.g., Back Orifice) or may subvert the system through a rootkit. A backdoor in a login system might take the form of a hard coded user and password combination which gives access to the system. Although the number of backdoors in systems using proprietary software (software whose source code is not publicly available) is not widely credited, they are nevertheless frequently exposed. Programmers have even succeeded in secretly installing large amounts of benign code as Easter eggs in programs, although such cases may involve official forbearance, if not actual permission. Many computer worms, such as Sobig and Mydoom, install a backdoor on the affected computer (generally a PC on broadband running Microsoft Windows and Microsoft Outlook). Such backdoors appear to be installed so that spammers can send junk e-mail from the infected machines. Others, such as the Sony/BMG rootkit distributed silently on millions of music CDs through late 2005, are intended as DRM measures-and, in that case, as data gathering agents, since both surreptitious programs they installed routinely contacted central servers.
