Obtaining a certificate is equivalent to having a promising future and good professional development, As we know, the 156-315.81.20 certification is a standard to test your IT skills.

All customers who have purchased our products have left deep impression on our 156-315.81.20 guide torrent.

**NEW QUESTION: 1** Refer to the exhibit. What are two ways to resolve the error BGP label allocation failure: Need a next hop address on LAN? (Choose two.) **A.** Configure vrf-table-label in the routing-instance. **B.** Configure a /32 static route with the next hop as itself to any remote address on the network assigned to the CE-facing interface. **C.** Resolve the MPLS issue between the PE routers. **D.** Configure a static ARP entry on fe-l/#3.0. **Answer: A,B**

**NEW QUESTION: 2** An administrator needs to secure a wireless network and restrict access based on the hardware address of the device. Which of the following solutions should be implemented? **A.** Force the WAP to use channel 1 **B.** Enable MAC filtering **C.** Upgrade to WPA2 encryption **D.** Use a stateful firewall **Answer: B**

**NEW QUESTION: 3** The management of Clay Industries have adhered to the following capital structure: 50% debt, 45% common equity, and 5% perpetual preferred equity. The following information applies to the firm: Before-tax cost of debt = 7.5% Combined state/federal tax rate = 35% Expected return on the market = 14.5% Annual risk-free rate of return = 5.25% Historical Beta coefficient of Clay Industries Common Stock = 1.15 Annual preferred dividend = \$1.35 Preferred stock net offering price = \$17.70 Expected annual common dividend = \$0.45 Common stock price = \$30.90 Expected growth rate = 11.75% Subjective risk premium = 3.3% Given this information, and using the Bond-Yield-plus-Risk-Premium approach to calculate the component cost of common equity, what is the Weighted Average Cost of Capital for Clay Industries? **A.** 9.97% **B.** 8.762% **C.** 7.70% **D.** The WACC for Clay Industries cannot be calculated from the information. **E.** 7.30% **F.** 15.03% **Answer: C** Explanation: Explanation/Reference: Explanation: The calculation of the Weighted Average Cost of Capital is as follows: {fraction of debt \* [yield to maturity on outstanding long-term debt][1-combined state/federal income tax rate]} + {fraction of preferred stock \* [annual dividend/net offering price]} + {fraction of common stock \* cost of equity}. The cost of common equity can be calculated using three methods, the Capital Asset Pricing Model (CAPM), the Dividend- Yield-plus-Growth-Rate (or Discounted Cash Flow) approach, and the Bond- Yield-plus-Risk-Premium approach. In this example, you are asked to calculate the cost of common equity using the Bond-Yield- plus-Risk-Premium approach. To calculate the cost of equity using this approach, take the yield to maturity on the firm's outstanding debt (7.5%) and add a subjective risk premium (3.3%), which gives a cost of common equity of 10.8%. The after-tax cost of debt can be found by multiplying the yield to maturity on the firm's outstanding long-term debt (7.5%) by (1-tax rate). Using this method, the after-tax cost of debt is found as 4.875%. The calculation of the cost of perpetual preferred

stock is relatively straightforward, simply divide the annual preferred dividend by the net offering price. Using this method, the cost of preferred stock is found as 7.627%. Incorporating these figures into the WACC equation gives the answer of 7.679%.

**NEW QUESTION: 4** Which is a gap of first generation hyper converged solutions addressed by Cisco HyperFlex?  
**A.** Integrated firewall for security monitoring  
**B.** Support for GPUs  
**C.** Integrated networking configuration during deployment  
**D.** Support for multiple hypervisors  
**Answer: C**
