NEW QUESTION: 1 Eclipse-based source control clients work on physical files, and they work with the IBM Domino Designer projects elements on the physical files. Which statement describes these elements? **A.** They only work with projects that are registered as source control compatible. **B.** They only work with projects that are saved on disk. **C.** They work with projects that have source controls defined. **D.** They work with projects that are available on the network.
Answer: B

NEW QUESTION: 2 A system has the ability to automatically provision additional virtual servers in response to a load increase. This is an example of which of the following cloud features? **A.** Orchestration **B.** Resource Pooling **C.** Virtual Network **D.** Replication **Answer: C**

NEW QUESTION: 3 Your network contains one Active Directory forest that has a root domain and three child domains. All domain controllers run Windows Server 2003 Service Pack 1 (SP1). Each domain has a different password policy. The domain is configured as shown in the exhibit. (Click the Exhibit button.) You plan to reduce the number of domains in the forest. You need to plan the restructuring of the forest to meet the following requirements: Maintain all existing password policies. Maintain all existing user account attributes. What should you include in your plan? **A.** Upgrade the forest root domain to Windows Server 2008. Use the Active Directory Migration Tool (ADMT) to migrate user accounts from the child domains to the forest root domain, and then remove the child domains. Enable fine-grained password policies. **B.** Upgrade all domains to Windows Server 2008. Redirect the users container in the root domain by using the redirusr.exe tool, and then remove the child domains. Enable fine-grained password policies. **C.** Upgrade all domains to Windows Server 2008 and enable SID history. Move all user accounts from the child domains to the root domain by using the movetree.exe tool, and then remove the child domains. **D.** Upgrade the forest root domain to Windows Server 2008. Use the Active Directory Migration Tool (ADMT) to migrate user accounts that contain SID history from the child domains to the forest root domain. Remove the child domains. **Answer: A**
Explanation/Reference: To reduce the number of domains from the forest without losing existing user account attributes and existing password policies, you need to Use the Active Directory Migration Tool (ADMT) to migrate user accounts that contain SID history from the child domains to the forest root domain. Remove the child domains SID history enables you to maintain user access to resources during the process of restructuring Active Directory domains. When you migrate an object to another domain, the object is assigned a new SID. Because you assign permissions to objects based on SIDs, when the SID changes, the user loses access to

that resource until you can reassign permissions. When you use ADMT to migrate objects between domains, the SID history is automatically retained. In this way, the SID from the source domain remains as an attribute of the object after the object is migrated to the target domain. Enable fine-grained password policies to keep existing password policies. Reference: Restructuring Active Directory Domains Within a Forest SID History
