NEW QUESTION: 1 You are deploying an Azure Kubernetes Services (AKS) cluster that will use multiple containers. You need to create the cluster and verify that the services for the containers are configured correctly and available. Which four commands should you use to develop the solution? To answer, move the appropriate command segments from the list of command segments to the answer area and arrange them in the correct order. **Answer:** Explanation: Explanation Step 1: az group create Create a resource group with the az group create command. An Azure resource group is a logical group in which Azure resources are deployed and managed. Example: The following example creates a resource group named myAKSCluster in the eastus location. az group create --name myAKSCluster --location eastus Step 2 : az aks create Use the az aks create command to create an AKS cluster. Step 3: kubectl apply To deploy your application, use the kubectl apply command. This command parses the manifest file and creates the defined Kubernetes objects. Step 4: az aks get-credentials Configure it with the credentials for the new AKS cluster. Example: az aks get-credentials --name aks-cluster --resource-group aks-resource-group References: <https://docs.bitnami.com/azure/get-started-aks/>

NEW QUESTION: 2 You have the data model shown in the exhibit. You need to create a hierarchy from DimProductSubcategory[ProductSubcategoryName] and DimProduct[ProductName].
