NEW QUESTION: 1Which option is the average cost to hire an employee in the United States?**A.** 25 thousand dollars**B.** 10 thousand dollars**C.** 5 thousand dollars**D.** 20 thousand dollars**Answer: B**

NEW QUESTION: 2What can be defined as a table of subjects and objects indicating what actions individual subjects can take upon individual objects?**A.** A capability table**B.** A capacity table**C.** An access control matrix**D.** An access control list**Answer: C****Explanation:**The matrix lists the users, groups and roles down the left side and the resources and functions across the top. The cells of the matrix can either indicate that access is allowed or indicate the type of access. CBK pp 317 - 318AIO3, p. 169 describes it as a table if subjects and objects specifying the access rights a certain subject possesses pertaining to specific objects.In either case, the matrix is a way of analyzing the access control needed by a population of subjects to a population of objects. This access control can be applied using rules, ACL's,capability tables, etc."A capacity table" is incorrect.This answer is a trap for the unwary -- it sounds a little like "capability table" but is just there todistract you."An access control list" is incorrect."It [ACL] specifies a list of users [subjects] who are allowed access to each object" CBK, p. 188Access control lists (ACL) could be used to implement the rules identified by an access controlmatrix but is different from the matrix itself."A capability table" is incorrect."Capability tables are used to track, manage and apply controls based on the object and rights, orcapabilities of a subject. For example, a table identifies the object, specifies access rights allowedfor a subject, and permits access based on the user's possession of a capability (or ticket) for theobject." CBK, pp. 191-192 To put it another way, as noted in AIO3 on p. 169, "A capabilitiy table isdifferent from an ACL because the subject is bound to the capability table, whereas the object isbound to the ACL."Again, a capability table could be used to implement the rules identified by an access controlmatrix but is different from the matrix itself.References:CBK pp. 191-192, 317-318AIO3, p. 169

NEW QUESTION: 3In a network that requires multilayer switches to use authentication via RADIUS/TACACS+, which of the following access control models will the switches need to utilize?**A.** 802.3af**B.** 802.1x**C.** 802.1q**D.** PKI**Answer: B****Explanation:**http://www.cisco.com/c/en/us/td/docs/ios/12_4t/12_4t11/ht_8021x.html#wp1258507
