You must minimize the cost of communication between services. You need to recommend an approach for data transmission between your application and Azure services. The solution must minimize

administrative effort. What should you recommend?  
**A.** Azure Queue storage  
**B.** Service Management API  
**C.** Azure Table storage  
**D.** Service Bus queue  
**Answer: D**  
**Explanation:** The cost of ACS transactions is insignificant when performing messaging operations against Service Bus queues. Service Bus acquires one ACS token per a single instance of the messaging factory object. The token is then reused until it expires, after about 20 minutes. Therefore, the volume of messaging operations in Service Bus is not directly proportional to the amount of ACS transactions required to support these operations.
