The total number of the clients is still increasing in recent years, We will be with you in every stage of your C-S4FTR-2023 exam preparation to give you the most reliable help.

You can try the Soft version of our C-S4FTR-2023 exam question, which can simulate the real exam, You will not need to struggle with the exam, For most IT certification candidates, passing SAP prep4sure exam is long and hard work.

**NEW QUESTION: 1** You are using Cloud CDN to deliver static HTTP(S) website content hosted on a Compute Engine instance group. You want to improve the cache hit ratio. What should you do? **A.** Make sure the HTTP(S) header "Cache-Region" points to the closest region of your users. **B.** Shorten the expiration time of the cached objects. **C.** Replicate the static content in a Cloud Storage bucket. Point Cloud CDN toward a load balancer on that bucket. **D.** Customize the cache keys to omit the protocol from the key. **Answer: D** Explanation: Explanation Reference [https://cloud.google.com/cdn/docs/bestpractices#using\\_custom\\_cache\\_keys\\_to\\_improve\\_cache\\_hit\\_ratio](https://cloud.google.com/cdn/docs/bestpractices#using_custom_cache_keys_to_improve_cache_hit_ratio)

**NEW QUESTION: 2** **A.** boot -m current **B.** boot rpool/ROOT/current **C.** beadm activate current **D.** boot -a Enter the current BE dataset name when prompted. **E.** boot -Z rpool/ROOT/current **F.** boot -L current **Answer: C** Explanation: You can change an inactive boot environment into an active boot environment. Only one boot environment can be active at a time. The newly activated boot environment becomes the default environment upon reboot. How to Activate an Existing Boot Environment 1. Use the following command to activate an existing, inactive boot environment: beadm activate beName beName is a variable for the name of the boot environment to be activated. Note the following specifications. beadm activate beName activates a boot environment by setting the bootable pool property, bootfs, to the value of the ROOT dataset of the boot environment that is being activated. beadm activate sets the newly activated boot environment as the default in the menu.lst file. 2. Reboot. The newly activated boot environment is now the default on the x86 GRUB menu or SPARC boot menu.

**NEW QUESTION: 3** You need to configure security for the SSRS instance on SSRS01 to connect to SSAS and minimize downtime. What should you do? (Each correct answer presents part of the solution. Choose all that apply.) **A.** Configure SSRS01 to use the Custom authentication type. **B.** Register a service principal name for the Report Server service. **C.** Restart the IIS service. **D.** Configure SSRS01 to use the Negotiate authentication type. **E.** Register a service principal

name for the Analysis Services service.**Answer: B,D**Explanation:A (not B): If you are deploying Reporting Services in a network that uses the Kerberos protocol for mutual authentication, you must create a Service Principal Name (SPN) for the Report Server service if you configure it to run as a domain user account.D (not E):\*See step 6 below.To register an SPN for a Report Server service running as a domain user Install Reporting Services and configure the Report Server service to run as a domain user account. Note that users will not be able to connect to the report server until you complete the following steps. Log on to the domain controller as domain administrator. Open a Command Prompt window. Copy the following command, replacing placeholder values with actual values that are valid for your network: Setspn -a http/<computer-name>.<domain-name>:<port> <domain-user-account> Run the command. Open the RsReportServer.config file and locate the <AuthenticationTypes> section. Add <RSWindowsNegotiate/> as the first entry in this section to enable NTLM.

\*RSWindowsNegotiate. If you initially set the Windows service account for the report server to NetworkService or LocalSystem in Reporting Services Configuration Manager, RSWindowsNegotiate is added to the RsReportServer.config file as the default setting. With this setting, the report server can accept requests from client applications requesting Kerberos or NTLM authentication. If Kerberos is requested and the authentication fails, the report server switches to NTLM authentication and prompts the user for credentials unless the network is configured to manage authentication transparently.Using RSWindowsNegotiate is your best option because it provides the greatest flexibility for multiple clients in an intranet environment.Not C: IIS is not mention in this scenario.Note:\* From scenario:/ A single-server deployment of SQL Server 2008 R2 Reporting Services (SSRS) in nativemode is installed on a server named SSRS01. The Reporting Server service is configuredto use a domain service account.Reference: Register a Service Principal Name (SPN) for a Report Server- --- ---

**NEW QUESTION: 4**How is malware that is not on the whitelist able to execute?**A.** by packing (encrypting or compressing) the file**B.** by changing the register setting**C.** by executing it in memory and injecting malicious code into a legitimate process that is currently running**D.** by executing it using the safe mode**Answer: C**
