NEW QUESTION: 1 A Java EE application contains business logic composed of EJB beans. All current clients are Java applications accessing the business logic using RMI. Some clients are remote (running in different JVMs) and some are local (running in the same JVM). Which of the following two occur if EJB components are exposed as Web services? (Choose two.)
A. New local clients must access business logic using only RMI
B. Current remote clients must switch from RMI to web service access.
C. New client applications can be built using the published WSDL to access existing business logic
D. New clients must only be written in java to access business logic
E. New remote clients can access business logic using RMI or web service access
Answer: C,E

NEW QUESTION: 2 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this scenario, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your company has a Microsoft Exchange Server 2019 hybrid deployment that contains two Mailbox servers named MBX1 and MBX2. The company has the departments shown in the following table. From the on-premises organization, outbound email is sent directly to the internet by using DNS lookups. You are informed that some sales department users send email messages that are identified as spam. You need to automatically block the sales department users from repeatedly sending spam. Solution: You modify the outbound spam filter policy in Exchange Online. Does this meet the goal?
A. No
B. Yes
Answer: A
Explanation: Explanation
