NEW QUESTION: 1A. Option AB. Option BC. Option C **Answer: A** Explanation: You have to run esxcli network ip interface list command to list all the IPs. Then you need to make sure that MTU size is correctly set in the VMkernel interface properties in the vsphere client.

NEW QUESTION: 2 How to view the matching number of security policy? **A.** display current-configuration **B.** display device **C.** display policy all **D.** display startup saved-configuration **Answer: C**

NEW QUESTION: 3 **Answer:** Explanation: Explanation Always Encrypted supports two types of encryption: randomized encryption and deterministic encryption.* Randomized encryption uses a method that encrypts data in a less predictable manner. Randomized encryption is more secure, but prevents searching, grouping, indexing, and joining on encrypted columns.* Deterministic encryption always generates the same encrypted value for any given plain text value. Using deterministic encryption allows point lookups, equality joins, grouping and indexing on encrypted columns. However, but may also allow unauthorized users to guess information about encrypted values by examining patterns in the encrypted column, especially if there is a small set of possible encrypted values, such as True/False, or North/South/East/West region.
