NEW QUESTION: 1 Which two characteristics differentiate the Cisco Meraki dashboard from competing network management interfaces? (Choose two.)
A. centralized single pane of glass access and management
B. comprehensive aggregator of multivendor networks
C. intuitive cloud-based user interface
D. built-in live chat for on-demand troubleshooting support
E. instantaneous access to virtualized applications
Answer: C,D

NEW QUESTION: 2 Which three statements best describe HSRP configuration on Cisco Nexus switches? (Choose three.)
A. In a vPC topology, the primary HSRP router will respond to ARP requests, but both HSRP routers will forward data traffic if the peer-gateway feature is enabled.
B. You can configure two overlapping HSRP groups to load share traffic from the connected hosts while providing the default router redundancy.
C. You can use the show standby command to verify HSRP operation and configuration.
D. In a vPC topology, the primary HSRP router will respond to ARP requests, but both HSRP routers will forward data traffic. No additional configuration is required.
E. If you remove the feature hsrp command, all relevant HSRP configuration information is also removed.
Answer: B,D,E
Explanation: HSRP allows you to configure multiple groups on an interface. You can configure two overlapping Ipv4 HSRP groups to load share traffic from the connected hosts while providing the default router redundancy expected from HSRP. HSRP has been enhanced for vPC environments, so both the active and standby router can forward data traffic. The primary router (higher priority) responds to ARP requests. Reference:

NEW QUESTION: 3 A web services company is planning a one-time high-profile event to be hosted on the corporate website. An outage, due to an attack, would be publicly embarrassing, so Joe, the Chief Executive Officer (CEO), has requested that his security engineers put temporary preventive controls in place. Which of the following would MOST appropriately address Joe's concerns?
A. Configure an intrusion prevention system that blocks IPs after detecting too many incomplete sessions.
B. Purchase additional bandwidth from the company's Internet service provider.
C. Contract and configure scrubbing services with third-party DDoS mitigation providers.
D. Ensure web services hosting the event use TCP cookies and deny_hosts.
Answer: C
Explanation: Scrubbing is an excellent way of dealing with this type of situation where the company wants to stay connected no matter what during the one-time high profile event. It involves deploying a multi-layered security approach backed by extensive threat research to defend against a variety of attacks with a guarantee of always-on. Incorrect Answers:
A: Making use of TCP cookies will not be helpful in this event since cookies are used to maintain selections on previous pages and attackers can assess cookies in transit or in storage to carry out their attacks.
B: Using intrusion prevention systems blocking IPs is contra

productive for a one-time high profile event if you want to attract and reach many clients and the same time.D: Purchasing additional bandwidth from the ISP not going to prevent attackers from hi-jacking your one-time event.References:Gregg, Michael, and Billy Haines, CASP CompTIA Advanced Security Practitioner Study Guide, John Wiley & Sons, Indianapolis, 2012, pp. 159, 165, 168<http://www.level3.com/en/products/ddos-mitigation/>
