Each and every ServiceNow Certification topic is elaborated with examples clearly, CIS-SPM exam torrent of us will offer an opportunity like this.

NEW QUESTION: 1 Identify the correct error description and solution for the following error message from the ESB profile: => ERROR - RelayUtils error while building Passthrough stream org.apache.axiom.soap.SOAPProcessingException: Transport level information does not match with SOAP Message namespace URI.**A.** This happens when a soap11 message is sent to a soap12 endpoint or vice versa. Solution: Correct the SOAP envelope namespace.**B.** Options a, b and c all provide mismatching reasons/solutions, so all of the answers are incorrect.**C.** The ESB profile has failed to extract the transport protocol from the given URL. This happens when the transport defined in the URL is not enabled in the system. Solution: Enable relevant transport sender in axis2.xml.**D.** This happens when a soap11 message is sent to a soap12 endpoint or vice versa, resulting in the message content type not matching the SOAP namespace URI, e.g., soap11 should have text/xml content type and soap12 should have application/soap+xml content type. Solution: Enable the relevant message builder/formatter in axis2.xml for the matching content type.**Answer: A**

NEW QUESTION: 2 A POWER520 customer is running IBM i 5.4 and is moving to a POWER7 server. Which of the following is a valid migration plan?**A.** Host IBM i 5.4 in a client LPAR on the POWER7.**B.** Migrate IBM i 5.4 to the POWER7.**C.** Upgrade from IBM i 5.4 to IBM i 7.1 after migrating to POWER7.**D.** Upgrade to IBM i 7.1 on the Power 520, then migrate to POWER7.**Answer: D**

NEW QUESTION: 3 A company has requested assistance with a new cross-site failover design to support business-critical applications. * It has two sites when are very well-connected, and latency is less than 5ms round trip. * The customer requires that its applications be restarted even in the event of a total site failure. * The applications must be kept online even when migrated during maintenance. * Storage arrays at either site support both synchronous and asynchronous replication. Which two options are accurate application requirements for this scenario? (Choose two.)**A.** The applications are latency-sensitive.**B.** The design must ensure application recoverability at the second site.**C.** The design must ensure continuous application uptime even during a total site failure.**D.** The design must prioritize application availability.**Answer: B,D**
