NEW QUESTION: 1 A Citrix Administrator needs to utilize the client IP address as the source IP address for the NetScaler to server connections. Which mode on the NetScaler will the administrator utilize to meet this requirement?
A. USNIP **B.** Layer 2 **C.** Layer 3 **D.** USIP
Answer: D

NEW QUESTION: 2 Which type of firewall can act on the behalf of the end device?
A. Proxy **B.** Application **C.** Packet **D.** Stateful packet
Answer: A
Explanation: Application firewalls, as indicated by the name, work at Layer 7, or the application layer of the OSI model. These devices act on behalf of a client (aka proxy) for requested services. Because application/proxy firewalls act on behalf of a client, they provide an additional "buffer" from port scans, application attacks, and so on. For example, if an attacker found a vulnerability in an application, the attacker would have to compromise the application/proxy firewall before attacking devices behind the firewall. The application/proxy firewall can also be patched quickly in the event that a vulnerability is discovered. The same may not hold true for patching all the internal devices.
