NEW QUESTION: 1A technician wants to change the security level for a set of internal websites accessed frequently by a user. Which of the following Control Panel utilities would allow the technician to complete this task?**A.** Internet Options**B.** Homegroup**C.** Credential Manager**D.** Windows Firewall**E.** Network and Sharing Center**Answer: D**

NEW QUESTION: 2An auction website enables users to bid on collectible items. The auction rules require that each bid is processed only once and in the order it was received. The current implementation is based on a fleet of Amazon EC2 web servers that write bid records into Amazon Kinesis Data Streams. A single t2.large instance has a cron job that runs the bid processor, which reads incoming bids from Kinesis Data Streams and processes each bid. The auction site is growing in popularity, but users are complaining that some bids are not registering. Troubleshooting indicates that the bid processor is too slow during peak demand hours, sometimes crashes while processing, and occasionally loses track of which records is being processed. What changes should make the bid processing more reliable?**A.** Refactor the web application to use the Amazon Kinesis Producer Library (KPL) when posting bids to Kinesis Data Streams. Refactor the bid processor to flag each record in Kinesis Data Streams as being unread, processing, and processed. At the start of each bid processing run, scan Kinesis Data Streams for unprocessed records.**B.** Refactor the web application to post each incoming bid to an Amazon SQS FIFO queue in place of Kinesis Data Streams. Refactor the bid processor to continuously poll the SQS queue. Place the bid processing EC2 instance in an Auto Scaling group with a minimum and a maximum size of 1.**C.** Refactor the web application to post each incoming bid to an Amazon SNS topic in place of Kinesis Data Streams. Configure the SNS topic

to trigger an AWS Lambda function that processes each bid as soon as a user submits it.**D.** Switch the EC2 instance type from t2.large to a larger general compute instance type. Put the bid processor EC2 instances in an Auto Scaling group that scales out the number of EC2 instances running the bid processor, based on the IncomingRecords metric in Kinesis Data Streams.**Answer: B**Explanation:AB: Not feasibleC: FIFO is better in this case compared to Kinesis, as it guarantee the order of the bid. Min Max1, is okay as the SQS will hold the queue in case of failure of the instance, till it come back again.D: Still it does not solve the ordering issue.

NEW QUESTION: 3A Developer is creating an AWS Lambda function to process a stream of data from an Amazon Kinesis Data Stream. When the Lambda function parses the data and encounters a missing field, it exits the function with an error. The function is generating duplicate records from the Kinesis stream. When the Developer looks at the stream output without the Lambda function, there are no duplicate records.What is the reason for the duplicates?**A.** The Lambda event source used asynchronous invocation, resulting in duplicate records.**B.** The Lambda function did not handle the error, and the Lambda service attempted to reprocess the data.**C.** The Lambda function did not advance the Kinesis stream pointer to the next record after the error.**D.** The Lambda function is not keeping up with the amount of data coming from the stream.**Answer: C**
