We boost professional expert team to organize and compile the N10-008 training guide diligently and provide the great service.

**NEW QUESTION: 1**Your network contains an Active Directory domain named contoso.com. The domain contains three VLANs. The VLANs are configured as shown in the following table. All client computers run either Windows 7 or Windows 8. The corporate security policy states that all of the client computers must have the latest security updates installed. You need to implement a solution to ensure that only the client computers that have all of the required security updates installed can connect to VLAN 1. The solution must ensure that all other client computers connect to VLAN 3. Which Network Access Protection (NAP) enforcement method should you implement?  
**A. VPN**  
**B. DHCP**  
**C. 802.1x**  
**D. IPsec**  
**Answer: C**  
**Explanation:** The most common method of the list is 802.1x for a variety of reasons. First, the industry has been selling 802.1x network authentication for the last 10 years. 1x gained tremendous popularity as wireless networking became prevalent in the late 90's and early 2000's and has been proven to be a viable solution to identifying assets and users on your network. For customers that have invested in 802.1x capable switches and access points, NAP can very easily be implemented to complement what is already in place. The Network Policy Server (NPS) role Windows Server 2008 has been dramatically improved to make 802.1x policy creation much simpler to do.  
Reference: Network Access Protection Using 802.1x VLAN's or Port ACLs - Which is right for you?  
<http://blogs.technet.com/b/wincat/archive/2008/08/19/network-access-protection-using-802-1x-vlan-s-or-port-acls-which-is-right-for-you.aspx>

**NEW QUESTION: 2**  
**A. DeviceInformationWatcher**  
**B. DeviceInformationCollection**  
**C. EnclosureLocation**  
**D. DeviceWatcher**  
**Answer: D**

**NEW QUESTION: 3**You have a virtual machine named VM1. You install Windows Server 2012 R2 on VM1. You plan to use VM1 as an image that will be distributed to sales users to demonstrate the features of a custom application. The custom application only requires the Web Server (IIS) server role to be installed. You need to ensure that the VHD file for VM1 only contains the required Windows Server 2012 R2 source files. Which tool should you use?  
**A. servermanagercmd.exe**  
**B. ocsetup.exe**  
**C. imagex.exe**  
**D. dism.exe**  
**Answer: D**  
**Explanation:** You can use DISM to: Add, remove, and enumerate packages and drivers. Enable or disable Windows features. Apply changes based on the offline servicing section of an unattend.xml answer file. Configure international settings. Upgrade a Windows image to a different edition. Prepare a Windows PE image. Take advantage of better logging. Service down-level operating systems like Windows Vista with SP1 and Windows Server 2008. Service all platforms (32-bit, 64-bit, and Itanium). Service a 32-bit image from a 64-bit host and service a 64-bit image from a 32-bit host. Make use of old Package Manager scripts. This command will mount the image before making any changes. This will ensure that only the required Windows Server 2012 R2 source files are contained.

**NEW QUESTION: 4A** mobile application developer needs to invoke a Java class directly from a server side Worklight adapter. Which one of the following tasks is required to accomplish this?  
**A.** Ensure the Java package begins with the com, org or net domain.**B.** Upload the Java package to the Worklight server.**C.** Assign a JavaScript variable as a reference to the Java class.  
**D.** Include the Java class in the <Worklight Project Folder>/server/native directory.**Answer: A**
