NEW QUESTION: 2Your network contains multiple servers that run Windows Server 2012. The network contains a Storage Area Network (SAN) that only supports Fibre Channel connections. You have two failover clusters. The failover clusters are configured as shown in the following table. Only the members of Cluster1 can connect to the SAN. You plan to implement 15 highly available virtual machines on Cluster2. All of the virtual machines will be stored in a single shared folder. You need to ensure that the VHD files of the virtual machines can be stored on the SAN. What should you do? (Each correct answer presents a complete solution. Choose all that apply.)**A.** From Cluster1, add the iSCSI Target Server cluster role.**B.** From a node in Cluster2, create a Virtual Fibre Channel SAN.**C.** From a node in Cluster1, create a Virtual Fibre Channel SAN.**D.** From Cluster1, configure the clustered File Server role of the File Server for scale-out application data type.**Answer: B,D**

NEW QUESTION: 3Which of the following is the MOST immediate consequence of failing to tune a newly installed intrusion detection system (IDS) with the threshold set to a low value?**A.** The number of false negatives increases**B.** The number of false positives increases**C.** Active

probing is missed **D**. Attack profiles are ignored **Answer: B** Explanation: Explanation Failure to tune an intrusion detection system (IDS) will result in many false positives, especially when the threshold is set to a low value. The other options are less likely given the fact that the threshold for sounding an alarm is set to a low value.
