NEW QUESTION: 4 The management of Allcycles.com, a motorcycle supply chain, is examining several capital projects. The firm is financed according to the following schedule based on market values:60% debt35% common stock5% perpetual preferred stockAdditionally, consider the following information:Yield on outstanding debt: 10.12%Tax rate: 35%Annual preferred dividend: \$0.64Preferred stock price: \$7.36Return on equity: 18%Dividend payout ratio: 25% Cost of common stock: 16.33%Using this information, what is the Weighted Average Cost of Capital for Allcycles.com?**A.** None of these answers.**B.** 10.55%**C.** 10.10%**D.** The answer cannot be completely calculated from the given information.**E.** 10.04%**F.** 9.98%**Answer: C**Explanation:

Explanation/Reference:Explanation:In order to calculate the WACC, it is necessary to first calculate the component after-tax cost of debt, common equity, and preferred equity. Once the cost of these components is determined, they are imputed into the WACC equation, which is as follows:
$$WACC = [(\% \text{ weight of debt securities} * \text{cost of debt}) + (\% \text{ weight of common stock} * \text{cost of common stock}) + (\% \text{ weight of preferred stock} * \text{cost of preferred stock})]$$
To calculate the component after-tax cost of debt, use the following equation:
$$\text{Cost of debt} = [\text{yield on outstanding debt securities} * (1 - \text{tax rate})]$$
Factoring in the given information into this equation would yield the following:
$$\text{After-tax cost of debt} = [10.12\% * (1 - 0.35\%)] = 6.578\%$$
To calculate the component cost of outstanding preferred stock, the following equation must be used:
$$\text{Cost of preferred stock} = [\text{annual dividend} / \text{preferred stock price}]$$
$$\text{Cost of preferred stock} = [\$0.64 / \$7.36] = 8.70\%$$
The final component of the WACC calculation, the cost of common equity, has been provided as 16.33%.Now that the after-tax cost of debt, preferred stock, and common stock have been determined, the WACC calculation can be found. The calculation of the WACC is as follows:
$$[0.60 * 0.06578] + [0.35 * 0.1633] + [0.05 * 0.0870] = 10.10\%$$
