NEW QUESTION: 1You have a computer named Computer1 that runs Windows 10 Enterprise. You plan to install the most recent updates to Computer1.You need to ensure that you can revert to the current state of Computer1 in the event that the computer becomes unresponsive after the update.What should you include in your solution?**A.** The Sync your settings options from the Accounts section of the Settings app**B.** The Refresh your PC option from the PC Settings**C.** The Reset this PC option from the Recovery section of the Settings app**D.** The Backup and Restore (Windows 7) control panel item**Answer: D****Explanation:** Explanation/Reference:Explanation:The question states that you need to ensure that you can revert to the current state of Computer1. The question does not specify what exactly the current state is in terms of software configuration but it would be safe to assume that Computer1 has Windows Store Apps installed, desktop applications installed and some previous Windows Updates installed.The only way to recover the computer to its 'current' state is to perform a full backup of the computer before updating it. Then if the computer becomes unresponsive after the update, we can simply restore the backup to return the computer to its state at the time of the backup.**Incorrect Answers:**A: When you Reset your PC, all your applications and data will be removed. It is like doing a complete Windows reinstall and formatting your hard drive.B: The Sync your settings options are used for syncing settings with a Microsoft account. This does not return the computer to its current state.D: When you Refresh your PC, your data, Windows Store Apps and application settings will be preserved.However, all your desktops applications and any existing Windows Updates will be removed. This does not return the computer to its current state.**References:** <http://www.howtogeek.com/220986/how-to-use-all-of-windows-10%E2%80%99s-backup-and-recovery-tools/>

NEW QUESTION: 2You have determined that an attack is currently underway on your database server. An attacker is currently logged in, modifying data. You want to preserve logs, caching and other data on this affected server.Which of the following actions will best allow you to stop the attack and still preserve data?**A.** Force an instant password reset**B.** Back up the system logs **C.** Shut down the server**D.** Pull the server network cable**Answer: D**

NEW QUESTION: 3Your company has 20 web APIs that were developed in-house.The company is developing 10 web apps that will use the web APIs. The web apps and the APIs are registered in the company's Azure Active Directory (Azure AD) tenant. The web APIs are published by using Azure API Management.You need to recommend a solution to block unauthorized requests originating from the web apps from reaching the web APIs. The solution must meet the following requirements:* Use Azure AD-generated claims.* Minimize configuration and management effort.What should you include in the recommendation? To answer, select the appropriate options in the answer area.**NOTE:** Each correct selection is worth one point.**Answer:** Explanation:
