**NEW QUESTION: 2** A frame that enters a switch fails the Frame Check Sequence. Which two interface counters are incremented? (Choose two) **A.** giants **B.** CRC **C.** frame **D.** input errors **E.** runts **Answer: B, D** Explanation: Whenever the physical transmission has problems, the receiving device might receive a frame whose bits have changed values. These frames do not pass the error detection logic as implemented in the FCS field in the Ethernet trailer. The receiving device discards the frame and counts it as some kind of input error. Cisco switches list this error as a CRC error. Cyclic redundancy check (CRC) is a term related to how the FCS math detects an error. The "input errors" includes runts, giants, no buffer, CRC, frame, overrun, and ignored counts. The output below show the interface counters with the "show interface s0/0/0" command:

**NEW QUESTION: 3** From the following choices, choose the definition that best matches the term Screening **A.** A technique used to educate plan members on how to distinguish between minor problems and serious conditions and effectively treat minor problems themselves **B.** A technique used to evaluate the medical necessity, appropriateness, and cost-effectiveness of healthcare services for a given patient **C.** A technique used to determine if a health condition is present even if a member has not experienced symptoms of the problem **D.** A technique in which information about a plan member's health status, personal and family health history, and health-related behaviors is used to predict the member's likelihood of experiencing specific illnesses or injuries **Answer: C**
