NEW QUESTION: 1 Which statement best describes Case Analyzer reporting?
A. Contains out of the box reports for both active and completed cases
B. Contains out of the box reports that are limited to completed cases
C. No out of the box reports are supplied
D. Contains out of the box reports that are limited to active cases
Answer: A

NEW QUESTION: 2

クラウドエンドポイントを持つSync1という名前の同期グループがあります。クラウドエンドポイントには、File1.txtという名前のファイルが含まれています。

オンプレミスネットワークには、Windows Server

2016を実行するサーバーが含まれています。サーバーは、次の表に示すように構成されています。

Sync1のエンドポイントとしてShare1を追加します。

1時間後、Share1のエンドポイントとしてShare2を追加します。

次の各ステートメントについて、ステートメントがtrueの場合は[はい]を選択します。それ以外の場合は、[いいえ]を選択します。注：それぞれの正しい選択は1ポイントの価値があります。

Answer: Explanation: Explanation: Statement 1: Yes If you add an Azure file share that has an existing set of files as a cloud endpoint to a sync group, the existing files are merged with any other files that are already on other endpoints in the sync group. Statement 2: No Files present in any server endpoint will not be overwritten by the files present in cloud endpoint. Hence this statement is false. If you add a server location with an existing set of files as a server endpoint to a sync group, those files will be merged with any other files already on other endpoints in the sync group but not vice versa. Statement 3: Yes Azure File Sync has a simple architecture : cloud endpoints, which is the Azure File Sync service and server endpoints, which are the registered servers with the service. On top of that, we have Sync Groups, which combine one cloud endpoint with one or more server endpoints. All members of this group will receive the replicated data where the central location will be the cloud endpoint. NEW QUESTION: 3 Which of the following statements are true:
I. A high score according to Altman's Z-Score methodology indicates a lower default risk
II. A high score according to the Probit or Logit models indicates a higher default risk
III. A high score according to Altman's Z-Score methodology indicates a higher default risk
IV. A high score according to the Probit or Logit models indicates a lower default risk
A. I and IV
B. II and III
C. I and II
D. III and IV
Answer: C
Explanation: A high score under the probit and logit models indicates a higher default risk, while under Altman's methodology it indicates a lower default risk. Therefore Choice 'd' is the correct answer.
