The free demo free is part of the official practice exam dumps pdf, Believe it or not, our 212-81 preparation questions will relieve you from poverty, Some of them want to get the ECES Certified Encryption Specialist certification, [212-81](#) but the real test is not easy to pass, thus much time and energy investment is inevitable.

Our customer service will be online all the time, There are so many advantages of our 212-81 study materials you should spare some time to get to know.

**NEW QUESTION: 1**You are in the process of setting up a highly available student registration website on Oracle CloudInfrastructure (OCI). You use a load balancer and a database service on OCI. You launch two compute instances each in a different subnet and add them to the back end set of a public load balancer. The load balancer is configured correctly and working. You then deploy the student registration application on these two compute instances. The application can communicate with the database service. However, when you type the URL of this student registration application in your browser, no web page appears. What could be the cause?  
**A.** The Dynamic Routing Gateway is preventing the client traffic from your data center network from reaching the public IP of the load balancer.  
**B.** The security lists of the subnets on which the two instances are located do not have "allow" rules for port 80 and 443.  
**C.** The load balancer performed a health check on the application and found that compute instances were not in a healthy state and terminated the instances.  
**D.** The client requested https access to the application and the load balancer service does not support end-to-end SSL from the client to the listener to the back-end set.  
**Answer: B**

**NEW QUESTION: 2**Refer to the exhibit. Riverbed 199-01 Exam In the accompanying exhibit, SH3 and SH4 are able to optimize FTP and HTTP sessions between Client41 and the respective application hosts Server31 and Server32. However, optimization does not happen for Client42 and these application hosts. A quick check on SH3 and SH4 registers neither optimized nor pass-through traffic from Client42. Client42 is able to ping Client41 and the in-path address of SH4. Note that SH3 and SH4 are in auto-discovery mode. What is the likely cause?  
**A.** The default gateway of Client41 is configured wrong  
**B.** The routing protocol between R3 and R4 is configured wrong  
**C.** The default gateway of SH3 is configured wrong  
**D.** The default gateway of Client42 is configured wrong  
**E.** The default gateway of SH4 is configured wrong  
**Answer: D**

**NEW QUESTION: 3**Drag and drop the actions below the image onto the boxes in the image for the actions that should be taken during this playbook step. Not all options are used.  
**Answer:**
