NEW QUESTION: 1 Scenario Given the new additional connectivity requirements and the topology diagram, use ASDM to accomplish the required ASA configurations to meet the requirements. New additional connectivity requirements: Once the correct ASA configurations have been configured: To access ASDM, click the ASA icon in the topology diagram. To access the Firefox Browser on the Outside PC, click the Outside PC icon in the topology diagram. To access the Command prompt on the Inside PC, click the Inside PC icon in the topology diagram. Note: After you make the configuration changes in ASDM, remember to click Apply to apply the configuration changes. Not all ASDM screens are enabled in this simulation, if some screen is not enabled, try to use different methods to configure the ASA to meet the requirements. In this simulation, some of the ASDM screens may not look and function exactly like the real ASDM.

Answer: Explanation: Follow the explanation part to get answer on this sim question.

Explanation First, for the HTTP access we need to create a NAT object. Here I called it HTTP but it can be given any name. Then, create the firewall rules to allow the HTTP access: You can verify using the outside PC to HTTP into 209.165.201.30. For step two, to be able to ping hosts on the outside, we edit the last service policy shown below: And then check the ICMP box only as shown below, then hit Apply. After that is done, we can ping www.cisco.com again to verify:

NEW QUESTION: 2 You have two servers named Server1 and Server2. Both servers run Windows Server 2012. The servers are configured as shown in the following table. The routing table for Server1 is shown in the Routing Table exhibit. (Click the Exhibit button.) From Server1, you attempt to ping Server2, but you receive an error message as shown in the Error exhibit. (Click the Exhibit button.) You need to ensure that you can successfully ping Server2 from Server1.

What should you do on Server1?**A.** Modify the default gateway settings.**B.** Modify the subnet mask.**C.** Modify the DNS settings.**D.** Disable Windows Firewall.**Answer: A**
Explanation:Route is used to view and modify the IP routing table.Route Print displays a list of current routes that the host knows.Default gateways are important to make IP routing work efficiently.TCP/IP hosts rely on default gateways for most of their communication needs with hosts on remote network segments. In this way, individual hosts are freed of the burden of having to maintain extensive and continuously updated knowledge about individual remote IP network segments. Only the router that acts as the default gateway needs to maintain this level of routing knowledge to reach other remote network segments in the larger internet network. In order for Host A on Network 1 to communicate with Host B on Network 2, Host A first checks its routing table to see if a specific route to Host B exists. If there is no specific route to Host B, Host A forwards its TCP/IP traffic for Host B to its own default gateway, IP Router1.
