Answer: E
Explanation:ExplanationYou can invoke a function that you've deployed to Oracle Functions in different ways:Using the Fn Project CLI.Using the Oracle Cloud Infrastructure CLI.Using the Oracle Cloud Infrastructure SDKs.Making a signed HTTP request to the function's invoke endpoint. Every function has an invoke endpoint.Each of the above invokes the function via requests to the API. Any request to the API must be authenticated by including a signature and the OCID of the compartment to which the function belongs in the request header. Such a request is referred to as a 'signed' request. The signature includes Oracle Cloud Infrastructure credentials in an encrypted form.
