NEW QUESTION: 3 DRAG DROP Note: This question is part of a series of questions that present the same Scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution while others might not have correct solution. Start of Repeated Scenario: You are planning a big data infrastructure by using an Apache Spark Cluster in Azure HDInsight. The cluster has 24 processor cores and 512 GB of memory. The Architecture of the infrastructure is shown in the exhibit: The architecture will be used by the following users: * Support analysts who run applications that will use REST to submit Spark jobs. * Business analysts who use JDBC and ODBC client applications from a real-time view. The business analysts run monitoring queries to access aggregate result for 15 minutes. The result will be referenced by subsequent queries. * Data analysts who publish notebooks drawn from batch layer, serving layer and speed layer queries. All of the notebooks must support native interpreters for data sources that are batch processed. The serving layer queries are written in Apache Hive and must support multiple sessions. Unique GUIDs are used across the data sources, which allow the data analysts to use Spark SQL. The data sources in the batch layer share a common storage container. The Following data sources are used: * Hive for sales data * Apache HBase for operations data * HBase for logistics data by using a single region server. End of Repeated scenario. The business analysts require to monitor the sales data. The queries must be faster and more interactive than the batch layer queries. You need to create a new infrastructure to support the queries. The solution must ensure that you can tune the cache policies of the queries. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to answer area. **Answer:** Explanation:
