NEW QUESTION: 1The administrator must back up a vCenter HA deployment.Which component must be backed up?**A.** Active node**B.** Passive node**C.** Witness node**D.** External database**Answer: A****Explanation:**Explanation/Reference:Explanation:When taking backups, avoid backing up the Passive and Witness nodes. Just take a backup of the Activenode. When restoring an Active node, you must remove all the cluster configuration, restore and re-create the HA cluster.Reference:

<https://www.altaro.com/vmware/how-to-deploy-a-vcenter-ha-cluster-part-1/>

NEW QUESTION: 2Universal Containers has a requirement to update the Salesforce Account object any time the corresponding account is updated within their financial system.Which three Salesforce capabilities should the Architect consider?**A.** Streaming API because of a requirement to dynamically inspect field names during runtime.**B.** Enterprise WSDL because of a requirement to utilize SOAP-based services**C.** Partner WSDL because of a requirement to dynamically inspect field names during runtime.**D.** Partner WSDL because of a requirement to utilize REST-based web services**E.** Partner WSDL because of a requirement to utilize SOAP-based web services.**Answer: B,C,E**

NEW QUESTION: 3This question consists of two statements: One is named Assertion and the other is named Reason. Both of these statements may be true; both may be false; or one may be true, while the other may be false.To answer this question, you must first evaluate whether

each statement is true on its own. If both statements are true, then you must evaluate whether the Reason (the second statement) correctly explains the Assertion (the first statement). You will then select the answer from the list of answer choices that matches your evaluation of the two statements. Assertion: You can manage VMware ESX hosts and virtual machines by using a System Center Virtual Machine Manager (SCVMM) server. Reason: SCVMM automatically imports ESX hosts and virtual machines when you add the corresponding VMware vCenter to the SCVMM server. Evaluate the Assertion and Reason statements and choose the correct answer option. **A.** The Assertion is false, but the Reason is true. **B.** The Assertion is true, but the Reason is false. **C.** Both the Assertion and the Reason are false. **D.** Both the Assertion and Reason are true, but the Reason is not the correct explanation for the Assertion. **E.** Both the Assertion and Reason are true, and the Reason is the correct explanation for the Assertion. **Answer: B**
Explanation: Explanation* Assertion: true Virtual Machine Manager (VMM) enables you to deploy and manage virtual machines and services across multiple hypervisor platforms, including VMware ESX and ESXi hosts.* Reason: False When you add a vCenter Server, VMM no longer imports, merges and synchronizes the VMware tree structure with VMM. Instead, after you add a vCenter Server, you can add selected ESX servers and hosts to any VMM host group. Therefore, there are fewer issues with synchronization.
